U.S. Army Natick Laboratories

#### FOREWORD

This report is one of the end-product; of a series of studies that began in 1952 when the Office of The Quartermaster General awarded a contract to Cornell University for summarization of distributional data for insects and other archropods of medical importance. The studies were planned in cooperation with personnel of the Office of the Surgeon General and the U. C. Department of Agriculture. Dr. Bernard V. Travis, Professor of Medical Entomology and Parasitology at Cornell University, has been the principal investigator since the inception of the series. A thorough search was made of the entomological literature, and for each country and major geographical region of the world a "summary report" was prepared, listing the reported occurrences and habitat data for medically important arthropods. These summary reports were placed on file at the Natick Laboratories and the Military Entomology Information Service, Walter Reed Hospital, where they are available for loan and reference.

By 1964 it became evident that changes in the field of entomology—both in knowledge acquired and in the distributions of some species—required updating of the material contained in the country summary reports. It was decided also that the material would be more useful if consolidated on a continental rather than a country basis. Contracts were let with Cornell University for accomplishing these two tasks simultaneously, and the present report for America North of Mexico is a result of this work. This is the fifth of six continental reports.

The distributions of the most important species have been mapped by the University of Pittsburgh's Department of Geography, and the maps will be published in an Atlas of Medically Important Arthropods, to accompany this and the other continental summaries.

The contract under which this work was accomplished was supported by funds from the Office of the Chief of Research and Development, Department of the Army. This contract was monitored by Dr. William C. Robison, Chief of the Geography Division, this Laboratory. Dr. John J. Pratt. Jr., Head of the Applied Entomology Group of the Pioneering Research Laboratory, was alternate project officer.

The following members of the staff at Cornell University assisted the authors in preparing this compilation: Eveline A on, Editha G. Gagni, Erika Zeballos and Ruth Breen, Librarian, Department of Entomology, Cornell University. Friscilla R. Lawrence typed the manuscript.

The Earth Sciences Laboratory is pleased to be able to present the results of the labors of Dr. Travis and his co-workers for the use of Army specialists in preventive medicine, public health officers, and entomologists.

### **ABSTRACT**

The occurrence of insects and other arthropods of medical importance in America North of Mexico is summarized on the basis of review of most of the available references in the scientific literature. The report includes, for each major group of arthropods, a listing of species and subspecies with biological and distributional data, tabulations of diseases or disease organisms transmitted, and literature citations.

The groups of  $\operatorname{art}^1$  ropods included, with the number of species or subspecies in parentheses, are:

Mosquitoes (361), Black flies (234), Sand flies (13), Midges (122), Horse flies (554), Biting flies (4), Non-biting flies (45), Fleas (543), Bugs (30), Urticating and vesicating arthropods (9), Ticks (110), Mites (78), and Miscellaneous arthropods (17).

#### ARTHROPODS OF MEDICAL IMPORTANCE IN AMERICA NORTH OF MEXICO

#### INTRODUCTION

#### 1. Format of this report

As will be seen from the Abstract and the Table of Contents, the data in this report are presented according to arthropod groups.

For each arthropod group the data are presented in tables, one or two as required. In <u>Table 1</u>, which is the basic table for each arthropod group, are listed the arthropods, biological data, distribution, and documentary references. In <u>Table 2</u> are summarized the disease organisms said by the author or authors to be transmitted by the arthropods.

After the above mentioned tabular material there is, for each arthropod group, a section of <u>Literature Cited</u>, containing the complete citations referred to in the basic table (Table 1).

The format of the data sections of the report is explained below. At the end of this Introduction there are brief explanatory comments on synonymy, interpretation of statements, and the order of listings for any particular species in Table 1.

#### Table 1 explained

For each group of arthropods (mosquitoes, black flies, etc.) its basic table, Table 1, lists for each species and subspecies the distribution (country or countries), together with any biological data, and the reference documenting each entry. We will explain this table by considering entries under each column heading in turn.

### a. SPECIES

Under the first heading, SPECIES, is entered: genus, species, subspecies (if any), and describer.

The format for a typical entry under SPECIES is somewhat variable, depending on the information available for each arthropod group. Typically, the genera and species are listed in alphabetical order in each group. We entries are made for subgenera. However, the subspecies, varieties and forms are listed as they appear in the publications. The describer's name is given unless the author has not listed the name and it is not clear from the literature what the describer's name should be.

See note on synonymy at the end of this Introduction.

## b. BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION

The basic data on Table 1 are presented under these headings. The entries in the table are made in the same order as the heading indicates, and are separated by the same punctuation mark, ";". "No data is indicated by "---"; that is, there may be no data on BREEDING HABITATS or ADULT ACTIVITY. Under DISTRIBUTION, the third category of information, a number is entered; this number represents a country or island in America North of Mexico, which may be identified by consulting the Geographical Index immediately following this Introduction.

For example, the first entry on Aedes acaypti on page 2 (---;---;62°) means that there are no data on BREEDING HABITATS or ADULT ACTIVITY for Canada (number 62 under DISTRIBUTION, as identified in the Geographical Index) for the particular species, although the indicate reference (Downe et al.) shows that the species occurs there.

Further comments on each part of this heading follow:

BREEDING HABITATS: No entry is made (as indicated by "---") unless the author makes clear and specific statements. The data concerning the biology of the immature forms are quite sparse, except for mosquitoes.

ADULT ACTIVITY: Again, no entry is made (as indicated by "---") unless the author makes clear and specific statements. Except for mosquitoes, the authors present little biological data for adult arthropods.

DISTRIBUTION: As indicated by the heading, the third category of information is DISTRIBUTION and the entry in the table consists of one or more numbers. These numbers represent countries or islands in America North of Mexico and may be identified by referring to the Geographical Index. All entries in this report use these numbers (in the DISTRIBUTION column of both Table 1 and Table 2) instead of the full country or island name. For example, 62 is the number for Canada. Where the authors have not recorded a specific country, an inclusive number is used. For example, 351 is the number for North America. For explanation of symbols attached to the country numbers in this column, see paragraph c immediately below.

## c. Symbols attached to the country number or to a reference date

in the DISTRIBUTION column, the country number may have a symbol attached to it, e.g., 62\* or 62°. In the DATE column, the date may have a symbol attached to it, e.g., 1936+.

Symbol \* after a country number indicates that the species is said by the author to transmit a disease organism to man. For example, on page 2 of this report, the second entry on Aedes aegusti ends with "...323\*\*\*. This means that the species in the United States (country 323 in the Index) is said to transmit a disease organism to man. When this symbol is used, the species of arthropod and the disease transmitted are entired in the table immediately following; that is, such entries in Table 1 are summarized in Table 2. Where two asterisks (\*\*) appear, they refer to two separate diseases.

Symbol of after the country number indicates that the species is said by the author either to bite or directly annoy man. For example, on page 2 of this report the first entry on Aedes aeggs:2 ends with "...62°". This means that this particular species in Canada (country 62 in Geographical Index) is said by the author either to bite or annoy man. These entries are not summarized, as are those marked "\*" above.

 $\underline{\text{Symbol}}$  after a reference date indicates that the record is an unconfirmed entry. In this report there are only two entries with this symbol; they are on pages 29 and 53. This means that these entries need further confirmation.

### d. (GENERAL STATEMENTS)

In addition to the three main categories of information as described above, the column heading indicates that there may be general statements. If so, this entry is made after those of the three main tategories and is enclosed in parentheses, exactly as the column heading indicates. This may be a statement for either the various countries or continents or for the various species. For example, on page 2 of this report, the third entry ends ". . .(Forest pools, ditches, excavations)".

### e. AUTHOR and DATE

Every entry in Table 1 is documented by an author (or a senior author) and date of publication. The AUTHOR and DATE (year of cited publication) are entered in the last two columns of Table 1. (The complete literature citation is given, for each arthropod group, in the section immediately following the tables.)

#### Table 2 explained

As noted in 2c, all listings marked "\*" in a table are summarized for the particular species of arthropod, in the table immediately following, giving the country or countries where occurring, and the disease or disease organism transmitted.

Table 2 summarizes such items from Table 1. For example, on page 2 of this report (Mosquitoes, Table 1) the next to the last listing and "...323\*\*. We note on page 3, under the same species, another listing ending "...323". These and similarly marked listings are summarized in Table 2, page 98. Besides the SPECIES and DISTRIBUTION, the table also gives information on DISEASE OR DISEASE ORGANISM. Entries in these columns are discussed below.

#### a. SPECIES and DISTRIBUTION

The SPECIES is, of course, that indicated in Table 1, and the DISTRIBUTION column summarizes all the numbers (i.e., countries or islands) that are marked "\*" listed under DISTRIBUTION in Table 1 for this particular species.

#### b. DISEASE OR DISEASE ORGANISM

Under this heading there are four subheadings (VIRUS & RICKETTSIA; PROTUZOA; HELMINTHS; CTHER). The subheading itself may be broken down, where necessary. For example, on page 98 (Mosquitoes, Table 2), the first subcolumn (VIRUS & RICKETTSIA) is broken down as: Dengue and Yellow fever, with numbers indicating the appropriate distribution.

### 4. Literature Cited section explained

At the end of each arthropod section there is a complete list of Literature Cited, as referred to in the last column of Table 1 (AUTHOR and DATE).

The abbreviations of the periodicals follow the World List of Scientific Periodicals.

## 5. Special comments

## a. A Lote on synonymy

The problem of attempting to straighten out synonymy of scientific names is beyond the scope of this report. Except for a few species, the scientific names, as used by the authors, are entered in the tables. In a few cases we have followed the synonymy of an acceptable monograph. As there is no universal agreement among taxonomists, the responsibility of synonymy must be referred to the interpretation of each specialist.

## b. A note on interpretation of statements

An attempt has been made to avoid interpreting the published statements. This has been found difficult in matters concerning disease transmission; thus it is often clearer if we use the author's own words. In general, it has been found that a few authors make unqualified statements concerning the vectors. Also, as one might expect, most of the statements are based on epidemiological evidence and not on actual transmissions.

## c. Order of listings for same species in Table 1

If there is more than one country number for a <u>single</u> entry, the country numbers are arranged in ascending order. For example, on page 4, the fourth listing reads: "...5, 62, 126..."

When there is more than cre entry (that is, citation with Author and Date) under a single species and describer, the entries are listed in ascending order of country number, based on the first (lowest) number for each entry. For example, on page 2, under Aedes abornginis, the first listing is 5, the next 5, 62, then 62 (four listings), and finally 323. Since all countries mentioned by a single author are listed in that entry, the countries under a given species are not necessarily all in numerical order when there is more than one entry for that species.

### GEOGRAPHICAL INDEX

In 1962 a world-wide descraphical Index was published\* listing countries and major regions in alphabetical order, and assigning to each a number. The following list consolidates the countries and certain other geographical entities of America North of Mexico fro that Index. These are shown on the adjacent map.

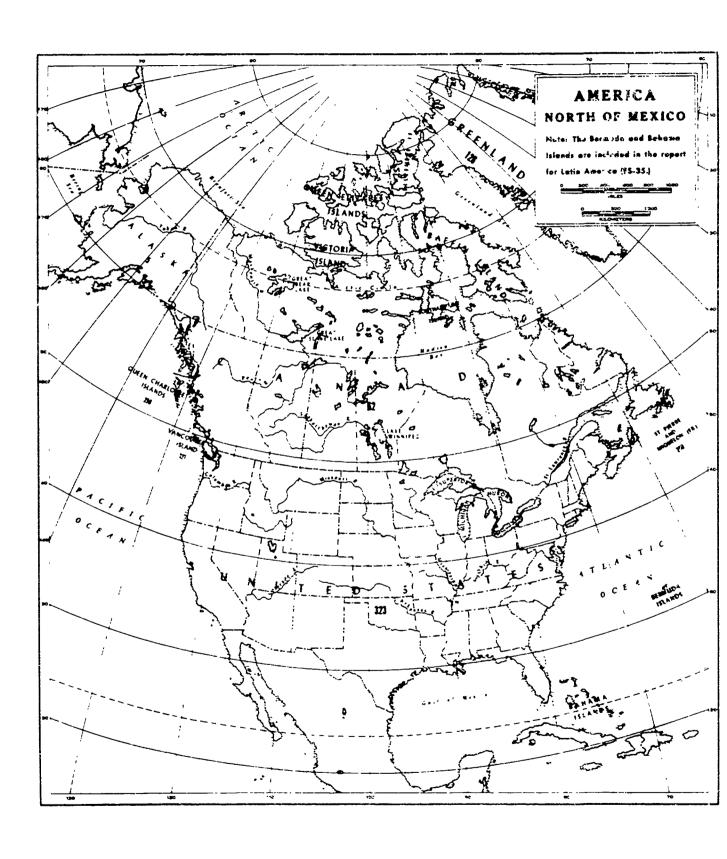

The numbers of countries and other localities in America North of Mexico are listed in order. For example, when 62 is entered, it stands for Canada, and 323 stands for the United States. Where the author or authors have not recorded a specific country, an inclusive title is entered, e.g., 351 for North America. This is the purpose of the Index: to identify the countries or other locations represented by numbers under DISTRIBUTION (Table 1 or Table 2).

Ross: Classification and coding system for compilations from the world literature on insects and other arthropods that affect the health and comfort of man, Technical Report ES-4, U.S. Army, Quartermaster Research & Engineering Center, Natick, Mass., 259 pp., 1962.

## GEOGRAPHICAL INDEX

- 5. Alaska
- 7. Aleutian Islands
- 26. Arctic Circle, within the (Inclusive title)
- 62. Canada
- 126. Greenland
  - Newfoundland, indexed under Canada, 62
- 250. Queen Charlotte Islands
  - Queen Elizabeth Archipelago, indexed under Canada, 62
- 260. Saint Pierre and Miquelon Islanda
- 323. United States (excluding Alaska and Hawaii\*)
- 327. Vancouver Island
- 351. North America (Inclusive title)

<sup>\*</sup>Hawaii is indexed in Technical Report ES-36, "Arthropods of Medical Importance in Australia and the Pacific Islands".

A .....

## ARTHROPOD DATA

## A. MOSQUITOES

The Losquito entries include information on the biology of the larvae and adults in addition to distribution and disease transmission. There are fewer species of mosquitoes (361) in America North of Mexico than in the other continents. However, the tabulations show that almost all species have a large documentation of their biology.

So many mosquitoes will bite man that an effort has been made to make a complete listing of mosquito species and subspecies. The synonymy is a difficult problem in this group; thus, some species and subspecies in the list are not valid names.

TABLE 1 - MOSQUITOES

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; PISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE

	;; 62; abundant; 323 (Bite by day or night)	Dyar	1921
	Shallow pools filled from melting snow or early vernal rains; semi-arid plains and prairie, abundant during late spring and early summer, bite freely at any time, most active in the evening and early morning; 323°	Rees	1943

TABLE 1 - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS: ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
AEDES compestris Dvar & Knab (cont.)	Semi-arid plains, prairies, alkaline waters, overflow of irrigation water, depressions; active in evening and morning hours, severe biter; 323	Matheson	1944
	Only in the spring; feed at any time but are more active at dusk, May to Nov.; 323	Rees	1934
	Open, unshaded waters; bite all day and during darkness, rare; 323	Stage et al.	1952
	Early spring snow-water pools; April; 323	Dickinson	1944
	Alkaline pools in arid plains;; 323	Mail	1934
	Marsh;; 323	Owen	1937
canadensis (Theobald)	;; 5°	Gjullin et al.	1961
	Abundant near the northern edge of the aspen grove lands, rare in the coniferous forest zone; bite readily and most annoying in dense poplar bluffs, May-July; 62°	Rempel	1953
	Woodland pools; in woods, severe biter, Sept., very rare; 62	Hearle	1926
	Open pools; in houses; 62	McLintock	1944
	; April, July-Sept.; 62; 323; in forested regions; 351 (Any standing water, large or small, in and near woods, bogs and swamps in forest regions, ready biters, all summer)	Steward & McWade	1961
	;; 62. Artificial pools; readily attack towards the evening, pest in woodlands; 323° (Woodland pools with decaying leaves, roadside puddles. spring fed pools, cranberry bogs, sphagnum bogs, pools, wooded swamps and open meadows, ice-covered ponds, common in May-June)	Matheson	1944
	;; 62, 323 (Transient ground puddles, open woods, pools and roadside ditches, active after sunset, bites low near the ground)	Dyar	1922
	;; 62, 323 (Temporary ground pools in shade)	Dyar	1928

TABLE 1 - MOSQUITOES (continued)

The contract of the contract o			-
SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR.	DATE
AEDES canadensis (Theobald) (cont.)	Temporary forest pools flooded by melting snow, depressions with decaying leaves and debris, in open meadow at high elevation; bites severely, mostly late afternoon in large wooded areas, rare in some areas; 323°	Stage et al.	1952
	Woodlard pools, seepage water from spring floods, post oak flats along river, stump holes, small sink holes, oxbows of small woodland streams; fierce biter, bites readily in shade all day; 323	Ross	1947
	Marshy ground pools near edge of forests; forested areas above 8000 feet elevation, bites during daytime near shaded woodland pools; 323	Harmston	1949
	Woodland pools containing decaying leaves, in small streams and ditches; rarely enter houses; 323	Carpenter et al.	1946
	Woods, pools, streams; abundant March; 323	Horsfall	1936
	Roadside ditches, ground puckles, pools caused by overflow of river with bottoms covered with dead leaves and grass;; 323	Mail	1934
	Temporary or intermittent waters of spring pools and stream bed pools, artificial containers floating in city dumping pond;; 323	Rowe	1942
	Alkaline pools, ponds, lake margins in valley, irrigated field;; 323°	Chapman	1966
	In pools or sphagnum mats, cold permanent swamp pools;; 323	Irwin	1943
	Shallow, semi-permanent ponds in open fields;; 323	Good	1945
	Pasture pools, heavy rain-filled pools;; 323	Lowry	1929
	Temporary rain pools in the open;: 323	Dickinson	1944
	Fresh water pond, cranberry bog;; 323	Bast	1963
	Swamps, root holes;; 323	Knutson	1943
	Shaded pools;; 323	0:/en	193
	Salt marsh;; 323	Ferrigno & Bast	1962

TABLE 1 - MOSQUITGES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
AENES canadensis (Theobald)	; all year; 323	Carpenter & Chamberlain	1946
(cont.)	: ccmmon; 323	King et al.	1939
varudensis vanadensis	;; 5, 6£, 323	Stone	1965
(Theobald)	Woodland pools, shaded pools with dead leaves, roadside puddles, spring-fed pools, cranberry bogs, pools in open sphagnum bogs, wooded swarps and open meadows, water pits, receding river clood waters; abundant; 323°	King et al.	1960
canadensis	;; 5	Stone	1965
mathesoni Middlekauff	Deep shaded fox holes; rare; 323	King et al.	1960
cantans Meigen	;; 62 (artificial containers, small pools or marshy spots near dwellings, bites man)	Winn & Beaulieu	1915
exitator	Brackish water;; 62	Twinn	1944
(Coquillett)	Salt marshes;; 62	Hearle	1926
	;; 62 (Salt coastal pools)	Dyar	1928
	Salt marshes, brackish and fresh water pools; bite by day in open at night in houses, March; 323°	Wallis	1960
	Coastal marshes, along margins of streams and rivers, in cranberry bogs, saline pools;; 323*	Matheson	1944
	Brackish water in salt holes on marsh;; 323	Stearns et al.	1933
	Drainage fromighlands;; 323	Headlee	1945
	; during day in shrubbery or long grass, flies at dusk, persistent and vicious biter; 323	Lowry	1929
	; experimental transmission of eastern equine encerhalitis; 323	Beadle	1952
	; April-Oct.; 323	Barnes et al.	1950
catapry lla	Shallow temporary or semi-permanent pool;; 5	Gjullin et al.	1961
Dyar	;; 5, 323 (Early spring pools, males swarm in open country, bites both day and night)	Dyar	1922

TABLE 1 - MOSOUITCES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
ASDES cataphylla	Small grassy depressions sheltered by bluffs; active day and night; 62°	Rempel	1953
Dyar (cont.)	Irrigated areas;; 62	Shemanchuk	1959
	; April-Aug.; 62	Hearle	1927
	; very rare; 62	Hearle	1926
	; forest; b2	Twinn	1940
	;; 62 (Grassy pools along riverbanks)	Dyar	1328
	Snow and flood water pools in the wooded sections of the mountains at elevations usually above 7,500 feet; May-July, Aug., bites readily, important pest in high mountain areas; 323°	Rees	1943
	Flooded pools in wooded regions; common in early spring-Aug.; 323	Matheson	1944
	Mountains; vicious biter also in sunshine, rare; 323	Stage et al.	1952
	Snow pools in wooded sections of mountains, grassy pools along river banks;; 323	Mail	1934
	; mountains at 10,000 feet elevation, bite readily in the wooded areas; 323	Harmston	1949
cataphylla cataphylla Dyar	;; 5, 62, 323	Stone	1965
cataphylla pacificersis Rearle	;; 62	Stone	1965
cine:eoborealis	Shallow leafy woodland pools; May and June; 62	Twinn	1926a
Felt & Your.g	;; 62; April, May; 323 (Early spring pools, in forest and leafy shaded ditches along roads)	Dyar	1922
	;; 62 (Artificial containers, small pools or marshy spots near dwellings, bites man)	Winn & Beaulieu	1915
cinereus	Vernal snow-melt pools;; 5°	Frohne	1954
Meigen	; abundant; 5	Frohne	195δ
	Cottonwood flood swamps, shallow protected surface pools and ditches with clean water, snow and rainpools; common; 62	Hearle	1926

TABLE 1 - MOSQUINGES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
AEDES cinereus Meigen (cont.)	Open woodland flooded by river; painful biter, May-July; 62°	Twinn	1926a
	Open poors, sloughs, ditches; woods; 62	McListock	1944
	Common at the northern edge of the aspen grove region;; 62	Rempel	1953
	Flood pools, along river banks;; 62	Dyar	1920
	Irrigated areas;; 62	Shemanchuk	1959
	;; 62 (Woodland pools, rain puddles, marshes, and bogs, April)	Steward & McWade	1961
	Shaded pools at high and low altitudes; attack by day and at dusk close to the ground and underbrush, March, abundant; 323	Stage et al.	1952
	Floodwater and woodland pools; in weeds and grasses near dwelling. a pest in some areas, rare; 323	King et al.	1960
	Small waterholes in glacial bogs and marshes, woodland pools; crepuscular; 323	Ross	1947
	Temporary grassy pools; peak May; 323	Knutson	1943
	Pools in coniferous forests, woodland pools in the hardwood region, temporary rain pools which are unshaded, open bogs, marshes;; 323	Owen	1937
	Shallow waters containing vegetation debris, margins of deeper pools;; 323	Irwin	1943
	Spring woodland pools with decaying leaves;; 323	Matheson	1944
	Various temporary ground pools, rain-filled pools;; 323	Lowry	1929
	Early spring snow-water pools, swamp pools;; 323	Dickinson	1944
	Seepage water, roadside ditches;; 323	Mail	1934
	Shallow woodland pools;; 323	Stearns et al.	1933
	; along the foothills of higher mountain ranges near wooded streams, persistent biter in wooded areas during daytime; 323°	Harmston	1949

1ABir 1 - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
AEDES cinereus Meigen	; April-Oct.; 323	Fellton et al.	1950
(cont.)	; light traps; 323	Carpenter et al.	1945
cirereus form fuscus Osten Sacken	; June-Aug.; 62	Hearle	1927
cinereus hemiteleus Dyar	Early spring pools, shallow grassy and sunlit or in deep forest; rather walk than fly, crawl on vegetation and attack the legs; 323°	Freeborn	1926
classicus Dyar	Ground pools; May; 323	Dyar	1922
communis (De Geer)	Breeds in water at $2^{\circ}-3^{\circ}$ C., dry basins of vernal pools or along dried margins of less transient standing water, brushy inclusions of tundra and alpine meadows;; $5^{\circ}$	Frohne	1956
	Shallow, temporary pools; forest; 5	Gjullin et al.	1961
	Area covered with brushy shrub, moss and grass;; 5	Gjullin & Cross	1951
	Temporary snow pool;; 5	Tulloch	1934
	; May-fug.; 5	Veber	1950
	; abundant; 5	Hopla	1965
	;; Swamps and marshes;; 323 (Early spring pools, remain in shade and bites after dark)	Matheson	1944
	Oxbow lakes and bog pools in shaded spruce forest with decaying logs and branches, rock pools with humus and moss; bite in spruce forest and willow thickets, open tundra meadows and mountain valleys at 1000 feet elevation all day and early evening, one of the most abundant and worst pests; 62°	Jenkins & Knight	1950
	Shallow snow pools in swampy coniferous forest; bites man on a sunny day and also in the evening; 62	Twinn et al.	1948
	; deep wooded valley with a large stream and unusually dease balsam fir and black spruce; 62	Brown	1951

TABLE 1 - MOSQUITOES (con.inued)

			-C3.VED.
SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
AEDES	; April-Aug.; 62	Hearle	1927
corructis (De Geer) (cont.)	Flooded mountain, meadows and woodland pools left by melting snow, mountain lake margins; high mountain areas, victous biters, especially at dusk, abundant; 32 70	Stage et al.	1952
	Spring pools in woodlands and swamp; common in wooded areas, flying around garden and porches; 323	Lowry	1929
	Natural pools, early-drying pools among aspens, beach pools and shallow swamp pools; April-Aug.; 323	Irwin	1943
	Shallow depressions; prefers shade; 323	Freeborn & Bohart	1951
	Low-lying grassy pools about the lake and in the edges of small ponds;; 323	Dyar	1924
	Woodland pools filled by melting snow with bottom covered with leaves;; 323	Carpenter	1950
	Temporary pools in coniferous forests;; 323	0wen	1937
	; bite in wooded areas during daytime and open areas at evening; 323	Harmston	1949
cornois cornois (De Geer)	Shaded overflow pools adjacent to streams, shaded streambeds; pine and aspen situations, 5,000-7,000 feet elevation, March-June; 323°	Chapman	1966
cornunis nevadensis Chapman & Barr	Open and shaded pools in mountains at 7,200-8,700 feet elevation, overflow pools adjacent to streams, open meadow pools of snow melt; annoying at 8,000-9,500 feet elevation, May-June; 323°	Chapmau	196¢
cornunis tancensis Dyar	Deep mountain meadow pools; prevalent above 5,000 feet elevation; 323	Freeborn	1926
exischminus Robineau- Desvoidy	;; 62 (Artificial containers, small pools or marshy spots near dwellings, bites man)	Winn & Beaulieu	1915
curriei Coquillett	Rock pools with brackish water and salt marshes; along the Coast and outlying islands; 62°	Hearle	1921 a
	; May-Aug.; 62 (Early ground puddles, persistent biter, abundant after sunset)	Dyar	1921

	;; 62 (Rar≥, in woods)	Dyar	1928
	;; 62 (Srow pools in woods and forests)	Steward & McWade	1961
	Cold, shaded pools in the coniferous forest; swamps of the coniferous forest, hay-July; 323°	0weta	1937
	Ground pools especially in spruce bogs; rare, in woods; 323	Lowry	1929

TABLE 1 - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
ASTED Distriction	Shallow waters containing vegetation debris; April; 323	Irwin	1943
Howard. Dyar & Knab (cont.)	Early spring pools at high altitude in dense forest, flooded pool of river;; 323	Mail	1934
	Kettle hole;; 323	Wiedhass	1952
iiscolor (Coquillett)	; rare, June-August; 323	Headlee	1945
iorsalis (Meigen)	Shallow weedy pool with alkaline water and rich in organic matter, a large dumping ground overgrown with wild barley and alkali grass, decaying hay straw, and manure; possible vector of Western equine encephalomyelitis, common in July-Sept.; 62°	Rempel	1953
	Coastal rock pools with high salinity, large salt marsh; seacoasts and islands, March-Aug.; 62	Hearle	1925
	Irrigated areas, temporary pools with alkaline water; in short-grass pastures all day, May-Sept.; 62°	Shemanchuk	1959
	Temporary snow and rain pools, tidal pools; prairie, open grassland; 62	Twinn	1949
	Alkaline pools in open pasture areas;: 62	Rempel	1950
	Open pools, ditches;; 62	McLintock	1944
	; dominant in the great plains; 62. Rice-fields and flood waters; spring and autumn; 323 (Salt marshes of the coastal areas, open and unshaded, alkaline, saline and fresh water, especially irrigation)	Matheson	1944
	;; 62, 323 (Coastal salt marshes, inland flood and irrigation water, vicious biters, attack day and night but most active toward the evening and on calm cloudy days)	Carpenter et al.	1946
	Open sunny areas flooded by saline, alkaline or fresh water, salt marshes; most abundant and troublesome in irrigated meadows and inundated grasslands, enter houses, attracted to light traps, naturally infected with western equine encephalomyelatis and St. Louis encephalitis viruses, experimental vector of Japanese B and California encephalitis viruses; 323°	Stage et al.	1952

TABLE 1 - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
AEDES dorsalis (Meigen) (cont.)	Water of high alkalinity, water or damp depressions, roadside ditch, irrigation ditch, open, temporary grassy pool, semi-permanent pools containing cattails and other hydrophytic vegetations, woodland pools deeply shaded with willows; April-Nov.; 323	Mail	1934
	Swampy areas, irrigated regions, lake surrounded by extensive flood areas, alkaline and fresh water, grassy pools; enter houses occasionally, vicious biter, in light trap, capable of transmitting western equine encephalitis; 323	Tate & Gates	1944
	Open ground pools, particularly in salt grass flats flooded with rain or irrigation water; bites at any time, most common pest in the valleys and deserts; 323	Rees	1934
	Temporary waters of stream bed pools, pasture pot holes and flooded areas, fluctuating marginal areas or marshes; experimental transmitter of equine encephalomyelitis; 323	Rowe	1942
	Water contaminated by industrial waste, saline waters from oil wells, seepage areas from factories; fierce biter, crepuscular; 323°	Ross	1947
	Inland fresh water and salt marsh drainage ditches; JanMarch; 323	Herms	1934
	Brackish and fresh water; rare; 323	King et al.	1960
	Salt marshes, open, sunny pools subject to intermittent flooding;; 323	Freeborn & Bohart	1951
	Along margins of salt lake with 12% salinity;; 323 (Tolerate semi-exposed situations, prairies, shallow weedy alkaline pools rich in organic matter)	Steward & McWade	1961
	Foul, stagnant pools contaminated with sewage;; 323	Olson & & Keegan	1944
	Temporary, exposed pools, foul, stagnant water;; 323	0wen	1937
	Alkaline pools or lakes;; 323	Dickinson	1944
	Salt water pools;; 323	Rozeboom	1942

	Small pools;: 323	Matheson	1944
	; April; 323	Wirth	1947
fuscus Osten Sacken	Pools, both woodland and open; rare, spring; 323	Headlee	1945
<i>galloisi</i> Yamada	;: 62	Stone	1961
gonimus Dyar & Knab	; June; 323	Dyar	1922
<i>grossbec</i> ki Dyar & Knab	Early spring pools; fierce biters, rare; 323°	Carpenter et al.	1946
	Seri-permanent woodland pools in sloughs; Jan., Feb.; 323	Wirth	1947
	Post oak flats along river; April-June; 323	Ross	1947
	Woodland pools and marshes: spring; 323	Wallis	1900
	Lake margins; Aug.; 323	Fellton et al.	1950
	Breeds away from the seacoast;; 323	Darsie et al.	1951
<i>Lenderso</i> ni Cockerell	;; 323	Stone	1965

TABLE 1 - MOSQUITCES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
AEDES newitti Hearle	; July and Aug.; 62	nearle	3923
hezodontus Dyar	Semi-permanent pools; tundra; 5°	Gjullin et al.	1961
	Carex marshes;; 5	Knight	1951
	Arctic tundra, clear water in alpine meadows at 1,000 feet elevation in unshaded snow melt pools and rock pools with much sedge, grass and sphagnum moss; pests in mountains, tundra meadows and near snowbanks, bite all day in sun and shade, June and July; 62°	Jenkins å Knight	1950
	Open or partially shaded meadow pools, ponds, marshy lake margins at 6,300-10,000 feet elevation; major pest in mountainous areas. March-July; 323	Chapman	1966
	Shallow pools in meadows or marshes or along streams; active after sunset behind bushes and tree trunks; 323	Dyar	1922
	Spring pools, hoofprints, tiny depressions of seepage areas, snow water in flooded meadows;; 323	Matneson	19
	Small pools;; 323	Freeborn & Bohart	1951
	; victous biter in shade by day, common in some areas; 323°	Stage et al.	1952
<i>hirsuteron</i> Theobald	Low wooded areas flooded in spring by river; troublesome biter; 62°	Twinn	1926a
	Exposed ditches; houses, bush, May-Aug.; 62	McLintock	1944
	;; 62 (Flood pools, with dead vegetable matter)	Dyar	1928
	Sometimes in early woodland pools; June, July; 323	Lowry	1923
	Flood pools of river valleys, depressions containing leaves and grasses, rain-filled pools in woods, hollows filled with rank weeds and rubbish filled by seepage from river;; 323	Mail	1934

TABLE 1 - MOSQUITOES (continues)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
AEDES hireuteron	Shaded fcrest pool, temporary rain pool,; 323	Owen	1937
Theopald (cont.)	;; 323°	Shields	1918
i <i>lahoensis</i> (lheobald)	Temporary snow and rain pools; prairie, open grassland: 62	Twinn	194:1
	; June and Aug.; 62	Hearle	1927
	;; 62, 323 (Early spring pools, in open country, swarzing over prominent objects after sunset)	Dyar	1921
	;; 62, 323 (Spring rainpools, in arid regions and river valleys without grass)	Dyar	1928
	Early in the spring in snow water pools or pools filled by early vernal rains, rock pockets filled with water from melting snow, pools showing a high alkalinity; open plains and low mountain regions, bite readily during the day, more active in the evening, April-May; 323°	Rees	1943
	Roadside of river overflow, flooded meadow; common on dry plains, May; 323	Dyar	1929
	Irrigated areas; abundant in some areas; 323	Stage et al.	1952
	Pools in grassy meadow;; 323	Dyar	1924
	; troublesome pest in plain areas and lower mountain valleys, June-Aug.; 323	Harmston	1949
i <del>rpiger</del> (Walker)	Pools in sphagnum-heath bog, temporary pools; June-July; 5	Gjullin et al.	1961
	;; 5°	Frohne	1956
	;; 5, 32, 323 (Snow pools in the treeless regions of the arctic, commonest and worst species of the far north)	Steward & McWade	1961
	Grassy pool in poplar bluffs;; 62	Rempel	1950
	; June-July, densely forested country; 62	Dyar	1920
	; April, May and Aug.; 62	Hearle	1927
	;; 62, 323 (Common in forested regions)	Rempel	1953

AEDES	;; 62 (In spring pools)	Dyar	1928
<pre>impiger (Walker) (cont.)</pre>	Large mat pool exposed to sun, beach pool; in wooded sections during day, about buildings in the evening, rare, May; 323	írwin	1943
	At 8000 feet elevation; Mar., June-July; 323°	Matheson	1944
	Temporary pools shaded by hardwood timber, cold, shaded pools in the dense coniferous icrest, early, temporary snow pools in the open;; 323	Owen	1917
	Pools in semi-wooded areas at high altitudes;; 323	Stage et al.	1952
	Snow pools in woods and meadows;; 323	Mail	1934
	Earliest spring pools;; 323	Lowry	1929
	; elevations of 6000 to 9000 feet, along mountain streams near willow growths; 323	Rees & Nielson	1951
irplacabilis (Walker)	Bogs, forest pools in the surrounding low- lying areas;; 62	Brown et al.	1951
	Temporary leafy pools; bite all day, MarMay, 323°	Knutson	1943
	Sphagnum mats of shaded pools, tamarack and poison sumac bogs; crepuscular; 323	Ross	1947
	In sunlit pools, shaded swamp pools;; 323	Irwin	1943
	Early cold woodland pools; June; 323	Lowry	1929
	Early spring snow-water pools;; 323	Dickinson	1944
	; May-July; 323	Blickle	1952
implicatus Vockeroth	Brackish water along coast;; 5. Coniferous forests;; 62; 323 (Temporary puddles of snow and rain water, bite readily in the evening and in woods at any time)	Steward & McWade	1961
	Temporary pools;, 5°	Gjullin et al.	1961
inconspicuus Grossbeck	Mountain, rock pool; SeptOct.; 323	Headlee	1945

TABLE ! - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
AEDES inorepitus Dyar	Small slow-flowing streams in wooded valley and shallow woodland pools; bires readily in the woods by day. May; 62°	Rempel	1953
	Stagnant creek flowing through bluff country;; 62	Rempel	1950
	Snow water, at 4.300-8,200 feet elevation, open and shaded meadow pools and ponds, roadside ditches, open and shaded ponds, pcol margins in foothills; principal pest in foothills and higher elevations, FebAug., 323	Chapman	1966
	Plains, open meadows and small pools in semi- wooded country from sea level to 6900 feet elevation, rain pools; prefer shade, abundant; 323	Stage et al.	1952
	Numerous in overflow pools along wooded streams; troublesome in wooded areas along foothills and higher valleys; 323	Harmstor	1949
	Spring pools in river valleys and edges of lakes, active after sunset, over bus. 3 and small trees;	Dyar	1922
	Overflow pools from irrigation ditches; fierce biter; 323°	Matheson	1944
	Flood pool, depressions along river banks in temporary pools;; 323	Mail	1934
inorepitus form hewitti Hearle	; June and July; 62	Hearle	1927
inorepitus Tutotus Dyar	; April-June; 323	Dyar	1929
inequitus form mutatus Dyar	; May; 62	Hearle	1927
infirmatus Dyar 🤄 Knab	Temporary woodland or open grassy pools; attack readily by day in and near woods, at night in and near houses, in light traps, naturally infected with western equine encephalitis, abundant; 323°	King et al.	1960
	Temporary rain pools; seldom enters houses; 323	Quinby	1941
	Mud holes under palmettos; woods; 323°	Beyer	1923
	; March-Dec.; 323	Carpenter & Chamberlain	1946

TABLE 1 - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
AEDES imulitus Dyar & Knab	;; 126	Dyar & Knab	1917
intrudens Dyar	Temporary snow melt pools in open areas of black spruce muckeg;; 5°	Gjullin et al.	1961
	;; 5. Common in the spruce forest; bite day and night; 62°	Rempel	1953
	Temporary water, snow pool; in houses and cns; 62	Dyar	1920
	Shallow leafy woodland pools;; 62	Twinn	1926 a
	Irrigated areas;; 62	Snemanchuk	1959
	Ditches;; 62°	Mulinteck	19-4
	; May-Aug.; 62 (Bogs and marshes, persistent biters)	Stewara & McWade	1961
	; deep wooded valley with a small stream: 62	Brown	1951
	; wooded areas; 62	Rempel	1950
	;; 62, 323 (In cold snow-pools and wet meriows, enter houses until July)	Dyar	1928
	In the ground in depressions in wooded regions, snow water pools floored with dead leaves and vegetation, in the spring and early summer; forest areas, bite by day or night; 323°	Rees	1943
	Ground pools formed by melted snow; enters houses freely; 323	Lowry	19.9
	Pools among aspens and on mat, beach pools: April-Aug.; 323	īrwin	1943
	Grassy pool fed by snow-water; abundant; 323	Dyar	192⊶
	Woodland pools shaded by deciduous trees, open oogs, marshy localities, forest pools in dense shade of coniferous;; 323	Owen	1937
	; Mar., bites mostly in May-July; 323°	Knutson	1943
	; rare in some areas; 323	Stage et al.	1952
	Shallow woodland pools;; 323	M 2son	1944

TABLE 1 - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
AEDES iridipennis Dyar	; Aug.; 323	Dyar	1922
jaraicensis (Theobald)	Open lot pools and woodlan! pools; July-August; 323	<b>Headlee</b>	1945
k <i>lotsi</i> Matheson	Edge of small, cold, clear mountain stream; in tall grass in meadow, at 8300 feet altitude, July; 323	Matheson	1933
labradoriensis Dyar & Shannon	;; 62	Dyar	1928
lateralis (Meigen)	Flood water in wooded river valley bottom;; 62	Twinn	1949
	;; 62, 323 (Shaded floodwater areas covered with debris and growth of cottonwoods or willows, invade houses, bite by day and toward dusk)	Matheson	1944
	Shallow waters containing vegetation, debri , sunlit pools, shaded or partly shaded areas; May-July; 323	Irwin	1943
	Overflow pools .n wooded river bottoms; serious pest; 323°	Freeborn & Bohart	1943
lazarersis	; June, July; 5	Dyar	1920
Felt & Young	Flood pool in cottonwood bottom land; very rare; 62	dearle	1926
	; May-Aug.; 62 (Early ground pools in forest, flood pools, bites shortly after dark)	Dyar	1921
	Early ground pools in forest; active after sunset, April-July; 323°	Dyar	1922
leuconotips	;; 5 (Muskeg pools)	Dyar	1928
Dyar	Muskeg pools; June-July; 62	Dyar	1920
	; May; 62	Hearle	1927
	; coast; 323	Seguy	1924
<i>masamae</i> Dyar	Small pools along little streams, most numerous about the snow line; May, July; 323	Dyar	1922

TABLE 1 - MOSQUITOES (continued)

SPECIES	GREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
AEDES pionips Dyar	Temporary or semi-permanent pools in sphagnum-heath bogs, roadside ditches, tractor tracks, small snallow bodies of water in recently disturbed ground;; 5	Gjullin et al.	1901
	; abundant; 5°	Hopla	1965
	; June; 5; May, July, Aug.; 62	Dyar	1920
	;; 5, 323 (Early spring pools in spruce forest, active after sunset)	Dyar	1922
	Cool and clear water in small depressions at the bases of spruce trees; tree branches, rarely bites; 62°	Rempel	1953
	Shaded rockpools with sedge, grass. mcss and organic debris, at edge of conifer forest; June; 62	Jenkins & Knignt	1950
	; deep wooded valley with a large stream and unusually derse balsam fir and black spruce; 62	Brown	1951
	; forest; 62	Twinn	1949
	;; 62, 323 (Large spring pools)	Dyar	1928
	Permanent pools in dense timber; forested mountains; 323	Mail	1934
	Small pools in meadow at 7000 feet elevation; rare; 323	Stage et al.	1952
	Shaded shallow pool; June; 323	Dyar	1929
pontoricensis Lidlow	Salire pools; Mar., June-Aug., Dec.; 323	Dyar	1922
p <i>retans</i> Grossbeck	Meadow; April-May, July, Sept.; 323	Headlee	1945
prodotes	; July; 5	Dyar	1920
Dyar	;; 5; June, Aug.; 62 (Early spring pools, bite both by day and night, males swarm high over spaces between bushes or small trees in open country)	Dyar	1921
p <i>roliz</i> us Pyar	Early spring pools; June, July; 5	Dyar	1922
pseudrdiantaeus Smith	;; 5, 62. Sphagnum bog swamp;; 323	Smith.	1952

TABLE 1 - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
AEDES pullatus	Small clear snow melt pools in Carex meadows;	Gjullin et al.	1961
(Coqui!.ett)	along streams and lakes, males swarm after sunset in opening of the forest or over willows)	Dyar	1921
	From sea level to 1000 feet elevation, unshaded bare granite or gneiss rock pools, pools with sedge, sphagnum or other mosses and humus on sides and bottoms, clear water;; 62°	Jenkins & Knight	1950
	Temporary water, pools; May-July, swarm after sunset; 62	Dyar	1920
	;; 62 (Artificial containers, small rools or marshy spots near dwellings)	Winn & Beaulieu	1915
	Ground depressions in the forest and meadows of higher mountain regions, pools filled with water from melting snow or from overflow of mountain streams; bite fiercely at any time during the day; 323°	Rees	1943
	Grassy pools near timber; abundant in mountainous areas and heavily wooded areas, May-Aug.; 323	Harmston	1949
	Shallow waters containing vegetation debris; rare; 323	Irwin	1943
	At 7,200-10,000 feet elevation in open and shaded meadow pools adjacent to streams;; 323	Chapman	1966
	Small pools found in tracks in marshy ground;; 323	Parker	1916
	Forest and meadows at 7000 feet elevation;; 323	Mathesor.	1944
	; bite all day in shade, common in some areas; 323	Stage et al.	1952
puncti des	Early snow pools; June-Aug.; 5	Dyar	1922
Dyar	Brackish coastal marshes;; 5°	Frohne	1956
	Carex marshes;; 5	Knight	1951
	;; 62, 323 (Pouls filled with snow water)	Dyar	1928

TABLE 1 - MOSQUITOFS (cortinued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
AEDES furctor	shallow semi-permanent pools in Sphagnum-heath bogs and Carex or Calamagrostis marshes; 5	Gjullin et al.	1961
(Kirby)	Area covered with brushy shrub, moss and grass area;; 5	Gjullin & Cross	1951
	Temporary sncw pools;; 5	Tulloch	1934
	; May-Aug.; 5	Webei	1950
	; abundant; 5°	Hopia	1965
	;; 5, 323 (Common in forested areas). Forest; in houses, fierce biter, attack in the evening and by night, in shade by day; 62°	Rempel	1953
	In black and white spluce forests, bog and rock pool with vegetation, sphagnum bog pools, sedge marsh pool with iron flocculate with an oil slick, grass pool with decaying wood and vegetation, shaded and unshaded with stained or turbid water; rare; 62	Jenkins & Knight	1950
	Snow pools at 3000 feet altitude, shallow woodland pools; in leep woods, bite all day, fairly common; 62	hear¹e	1926
	Pools and marshy areas with vegetation, on tree- less tundra meadow, in swampy woods; active after sunset; 62	Twinn et al.	1948
	; deep wooded valley with a large stream and unusually dense balsam fir and black spruce; 62	Brown	1951
	; persistent biters, most common and annoying; 62° (Woodland and forest species, any body of standing water, large or small and roadside ditches, marshes, early species and can withstand repeated freezing and thawing)	Steward & McWade	1961
	; May-Sept.; 62	Toyar	1920
	Pools in the timber and mountain meadows, especially pools with mossy bettoms usually filled with water from melting snow and the more permanent pools are slightly acidic; timbered regions, persistent birers, 323°	Rees	1943

TABLE 1 - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
AEDES punctor (Kirby)	Shaded swamp pools; in wooded regions day and night, in and around buildings during early morning and evening, April-Aug.; 323	Irwin	1943
(cont.)	In early spring usually in pools containing decaying organic matter; bite during the day or at dusk; 323	Rees	1934
	Cold, shaded pools of the coniferous fcrest, woodland pools in deciduous forest, open bogs;; 323	Owen	1937
	Early pools, especially mossy woodland pools and bog pools;; 323	Lowry	1929
	Mountain areas up to 13,000 feet elevation;; 323	Matheson	1944
	Early spring snow-water pools;; 323	Dickinson	1944
	Wooded swamps;; 323	Stearns et al.	1933
purpureipes Aitken	;; 323	Stone	1965
<i>quaylei</i> Dyar & Knab	;; 62°. Tidewater pools;; 323°	Dyar	1907
<i>rempeli</i> Vockeroth	;; 62	Stone	1965
riparius	;; 5	Stone	1965
Dyar & Knab	Small weedy ditches and depressions in the neighborhood of clumps of aspen poplar, in transition zone between forest and prairie; May; 62	Rempel	1953
	Irrigated areas;; 62	Shemanchuk	1959
	Ditches;; 62	McLintock	1944
	; prairie; 62	Twinn	1949
	; June; 62	Dyar	1921
	;; 62;; 323 (Prairies in grass-land pools, ditches and depressions near poplar and willow clumps)	Steward & McWade	1961

scapularis (Roncani)	Rainwater pools; susceptible to experimental infection with yellow fever virus, rare; 323	King et al.	1900
	;; 323°	McGregor & Eads	1943
s <i>enizopina</i> z Dyar	Snow-water, in foothills, open meadow pools, marshy lake margins at 5000-8,700 feet; Feb., April-June; 323°	Chapman	1966
	Small depressions, around edge of permanent pools in open meadow, foul water with high alkalinity;; 323	Mail	1934
	Overflow from a permanent pool, cattle tracks, scummy seepage, water in the open;; 323	Dyar	1929
serratus (Theobald)	Low swampy woodland and mountain pools, meadows, mountains; June-Sept.; 323	Headlee	1945
sierrensis (Ludlow)	;; 62, 323	Stone	1965
(Lugiow)	Tree holes in quaking aspen and black cottonwood at 6,700-7,500 feet; bite at 6,700 feet; April-Sept. and Nov.; :23°	Chapman	1966
signifera (Coquillett)	Tree holes, occasionally barrels or tubs; Aug., Nov.; 323	Headlee	1945
smithii Coquillett	Pitcher plants in cold bog, orchids; May; 323	Felt	1904

TABLE 1 - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
AEDES sollicitans (Walker)	Salt marsh;; 62	Twinn	1949
	Pools in salt marsh along coast, pools filled by extra high tides or heavy rains, salt water pools; thick pine woods, open beaches at dusk, severe biters both day and night, enter houses freely; 323°	Lowry	1929
	Pot holes and depressions; bite fiercely in grass and shrubbery by day, may fly 40-50 miles, experimental vector of eastern and western equine encephalitis; 323	King er al.	1960
	Salt marshes along ocean coasts, salt water pumped from oil well, brackish swamp; bite in full sunlight, more prevalent in spring and autumn; 323	King et al.	1939
	Salt or brackish pools on tidal marshes; bite especially late afternoon; 323	Komp	1923
	Salt water from mine or oil well crainage, waters with a salinity three times the average of ocean water;; 323	Ross	1947
	Brackish swamps, oil fields;; 323	Matheson	1944
	Surface water, pot hole, ditch, marsh;, 323	Bick	1946
	Salt and brackish mud water;; 323	Beyer	1923
	Goil of salt marsh after heavy rain;; 323	Stearns et al.	1933
	Saline pools;; 323	Fellton et al.	1950
	Relatively fresh-water pool;; 323	Carpenter & Middlekauff	1944
	Salt wells;; 323°	Wilson et al.	1946
	; coastal and bay areas; 323	Dorer et al.	1944
	; ligat traps; 323	Edman & Downe	1964
	; all year; 323	Carpenter & Chamberlain	1946

TABLE 1 - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
AEDES spencerli	Shallow grassy depressions and overgrown roadside ditches; common in April, Sept.; 62	Rempel	1953
(Theobald)	Irrigated areas; bice all day; 62°	Shemanchuk	1959
	Temporary snow and rain pools; prairie; 62	Twinn	1949
	Shallow, weedy ditches and grassy sloughs;, 62. Plains and mountains;; 323	Matheson	1944
	Open pools;; 62	McLintock	1944
	Water on edge of alfalfa field, temporary pool caused by rains, irrigation water in clover field; bites both day and night, July; 323°	Parker	1916
	Early in the spring in surface pools filled by melting snow or spring rains, frequently alkaline; plains, prairie regions, foothills, April; 323	Reas	1943
	Roadside ditches, hollows by river banks; May-Aug.; 323	Mail	1934
	Shallow waters containing vegetation debris; rare; 323	Irwin	1943
	Marshes; in light trap; 323	Ross	1947
	Shallow canyon with grassy spots surrounded by willows;; 323	Dyar	1929
	; July-Sept.; 323	Dickinson	1944
spencerii	;; 62, 323	Stone	1965
idanoensis (Theobald)	Foothills, open roadside ditches and meadow pools near river; May-Aug.; 323°	Chapman	1966
spenserii spenserii (Theobald)	;; 62, 323	Stone	1965
scuariger (Coquillett)	Pools and narrow channels filled by the higher monthly tides; common in bushes in ravines near shore; 323	Dyar	1922
	Brackish water; bites during day and before dusk; $323^{\circ}$	Matheson	1944
	Salt water, along wooded stream beds;; 323	Freeborn & Bohart	1951
	Salt marsh drainage ditches;; 323	Herms	1934

!ABLE 1 - MOSQUITOLS (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
AEDES Sticticus	Common in flooded wooded valleys; May-June; 62°	Rempel	1953
(Meigen)	Floodwater in wooded river valley bottoms;; 62	Twinn	1949
	Irrigated areas;; 62	Shemanchuk	1959
	;; 62, 323 (Woods and open country, flood pools along streams and rivers, persistent biters in day and evening, May-Sept.)	Steward & McWade	1961
	Open or woodland pools on the flood plains of streams where vernal flooding occurs, low mountain valleys along margins of larger streams; victous biter, in woods or in the open during the day, more active in the evening; 323°	Rees	1943
	Brushy bottom lands along river, spring floods; capable of transmitting western equine and St. Louis encephalitis virus; 323	Stage et al.	1952
	Early spring pools; under bush; 323	Rozeboom	1942
	Floodwaters, temporary grassy pools in field and thickets, rain pools; rare; 323	King et al.	1960
	Along flood plains of larger rivers in flood pools, shaded pools; common; 323	Ross	1947
	Temporary spring pools in thick woods;; 323	Rowe	1942
	Shaded permanent swamp pool;; 323	Irwin	1943
	; all year; 523	Quinby	1941
stimulæns (Walker)	Temporary snow pools; June-Aug.; 5	Tulloch	1934
(Markery	Semi-permanent pools overgrown with Equipator fluviatile or Potentilla palastris;; 5	Gjullin et al.	1961
	;; 5; persistent and most annoying biter near towns and villages; 62° (Snow water and rain pools of every kind, April-June)	Steward & McWade	1961
	;; 5, 62, 323 (Raifilled woodland pools along rivers, vicious biters and often annoying in woodlands)	Carpenter et al.	1946
	;; 5°	Hopla	1265
	Temporary waters in and near city; persistent biter by day and at dusk, April-July; 62	Twinn	1926
	Pools overflowed by early high water, along streams, early marsh pools;; 62	Dyar	1920

TABLE 1 - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
AEDES	; deep wooded area with a small stream; 62	Brown	1951
stimulans (Walker) (cont.)	; in woods; 62°	Downe et al.	1963
	; Aug.; 62	Winn & Beaulieu	1932
	;; 62, 323 (Woodland and river flood pools, swamps, marshes, rarely enter houses, invades the urban communities. villages and parks, vicious biter and occurs in enormous number rendering life almost unendurable, April-Sept.)	Matheson	1944
	Pools formed by the overflow of streams, surface pools filled from snow water and early spring rains; wooded regions of the mountains at lower elevations, readily bites man any time during the day; 323°	Rees	1943
	Shaded woodland pools, temporary rain pools exposed to sunlight, forest pools, semi-permanent pools; bites readily in the woods at all hours; 323	Owen	1937
	Beach and mat pools; in wooded areas day and night, in and above houses early morning and evening, abundant; 323	Irwin	1943
	Swamp waters; Sept.; 323	Dickinson	1944
	Temporary waters of spring pools and pond overflows, intermittent stream bed pool;; 323	Rowe	1942
	Flood pools of river bottoms, rain filled pools in the woods;; 323	Mail	1934
	Open ground pools;; 323	Lowry	1929
	Stump holes;; 323	Ross	1947
	; pest in some areas, rare; 323	King et al.	1960
	; March-Aug.; 323	Tellton e al.	1950
subcantans Felt	; June; 62 (Artificial containers, small pools or marshy spots near dwellings, bites man)	Winn & Beaulieu	1915
	Fresh water;; 323	Headlee	1945
sylvestris (Thombold)	River flooded open flats and meadows;; 62°	Hearle	1921 a
(Theobald)	; June, July; 62 (Artificial containers, small pools or marshy spots near dwellings)	Winn & Beaulieu	1915

TABLE 1 - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
AEDES sylvest vis (Theobild) (cont.:	Temporary pool near habitation, pool formed by overflow of irrigation water, small permanent pools, waste irrigation water, pool in edge of alfalfa field, temporary rain mools and roadside pool; bites day and night, May-Aug.; 323°	Parker	1916
	Clear woodland pools, open swamp areas;; 323	Headlee	1945
s <i>jlvicola</i> Grossbeck	Pools in dense woodlands; May, July; 323	Headlee	1945
taenioriynchus (Wiedemann)	Salt marshes;; 62	Hearle	1926
(Wiedemann)	Coastal marsh's with mangrove and pickleweed, pot holes and temporary pools in Batis and Distichlis, fresh water pools; very annoying and fierce biter in shade in mangrove and other forests, in shrubbery about dwellings, in light traps, experimental vector of several strains of encephalitis; 323°	King et al.	1960
	Salt or brackish pools on tidal marshes; bites by day especially late afternoon; 323	Komp	1923
	Salt marshes flooded by rains or tides; common; 323°	King et al.	1939
	Saline pools in oil fields, occasionally in fresh water;; 323	Matheson	ır 4
	Fresh water pool thirty miles from coastal marshes;; 323	Carpenter & Middlekauff	1944
	Surface water, ditch;; 323	3ick	1946
	; abundant and annoying pest, near seashore; 323	Reyer	1923
	; all year; 323	Carpenter & Chamberlain	1946
tahoensis Dyar	Large open pools; May-June; 323	Dyar	1922
thelcter Dyar	Temporary rain pools in limestone strata depressions, densely shaded pool with much Sesuvium; in light traps, Oct. and Nov., rare; 323°	King et al.	1960
	Temporary pools, overflow irrigation water; spring and autumn; 323	Matheson	1944

TABLE 1 - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
AEDE? thibaulti Dyar & Knab	Holes at the bases of trees and stumps; hollow stumps and trees near breeding places, March- July; 323°	Shields	1938
	Tree and stump holes in swamps; bite fiercely in woodlands at midday, common; 323°	Matheson	1944
	Tree holes preferably of sweet gum and tupelo gum trees;; 323	Ross	1947
	; rest in hollow trees and stumps, rarely about dwellings, daytime biter, rare; 323	King et al.	1960
	; DecMay; 323	Carpenter et al.	1946
tormentor Dyar & Knab	Transient woodland pools; bite late afternoon to dusk in forested areas; 323°	Breeland et al.	1961
	Temporary rain-filled pools during summer months;; 323	Carpenter et al.	1946
	; light traps, SeptOct.; 323	Dow et al.	1964
	; MarAug.; 323	Wirth	1947
	; rare; 323	King et al.	1939
tortilis (Theobald)	Temporary rain pool;; 323	Thurman et al.	1951
	; in light trap, Aug., rare; 323	King et al.	1960
trichurus	Small weedy sloughs;; 62	Rempel	1953
(Dyar)	; deep wooded valley with a small stream: 62	Brown	1951
	; wooded area; 62	Twinn	1949
	; April-July; 62;; 323 (Woodland pocls and swamps)	Stelard & McWade	1961
	; in woods; 62°	Downe et al.	1963
	;; 62, 323 (Spring pools, wooded and marshy areas, bites freel; in wooded regions)	Matheson	1944
	;; 62, 323 (Early spring pools, edges of grassy marshes)	Dyar	1928
	;; 62 (Ground pools, ditches)	Dyar	1921
	Pools at edges of grassy swamps, ditches along roads, wood pools; common; 323	Lowry	1929
	hore acidic pools of bog mat; wooded regions, enter houses; 323	Irwin	1943

TABLE 1 - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (CENERAL STATEMENTS)	AUTHOR	DATE
AEDES t: shurus	Melting snow pools at high altituces: rare in some areas; 323	Stage et al.	1952
(Dyar) (cont.)	Marshes; bite day and night; 323°	Dyar	1929
	Partially shaded pools in swamp, open bog;; 323	Owen	1937
	1 'ly spring snow-water pools;; 323	Dickinson	1944
	Ground pools;; 323	Dyar	1922
	; March-Aug.; 323	Blickle	1952
triser atus (Say)	Tree noles, artificial containers; June and Sept., rare; 62	Twinn	.926a
	Pitcher plants;; 62	Rempel	1950
	;; 62, 323 (Common in woodlands and around homes, bites man both day and early evening)	Carpenter et al.	1946
	;; 62, 323 (Attracted to lights, July)	Steward & McWade	1961
	Tree holes in woodlands and in Bursera simarubra, pitcher plants, artificial containers; in light traps, fierce daytime biter in or near woods and about houses, potential and capable vector of yellow fever, western and eastern equine encephalitis, abundant; 323°	King et a).	1960
	Swamps; enter houses, experimental transmission of equine encephalomyelitis; 323	Knutson	1943
	Fresh water, semi-permanent water, roadside pool;; 323	Darsie et al.	1951
	Pot holes;; 323	Olson & Keegan	1944
	; experimentally infected with Whole remin banarofol; 323	£yles & Most	1947
	; experimental transmission of eastern equine encephalitis: 323	Beadle	1957
	; all year; 323	Carpenter & Chamberlain	1946
	; common; 323	Ring et al.	1939
	; rare; 323	Beyer	1923
	;; 351 (Tree holes, pitcher plants and artificial containers, bite is painful)	Rezpel	1953

TABLE 1 - MOSQUITOES (continued)

SPECIES	GENERAL STATEMENTS)	AJTHOR	DATE
AEDES trivittatus (Coquillett)	;; 62, 323 (Woodland pools and swamps, semi-open or lightly wooded areas, rarely in forests, persistent biters day and night)	Steward & McWade	1961
	Temporary flooded areas, rain pools and stream bed pools, intermittent marshes, margins of permanent ponds; important pest during summer and fall; 323	Rowe	11 .
	Temporary pools, shady woodland pools resulting from spring rains and floods; May-Oct.; 323	Ross	1947
	Temporary pools in open and shallow ditches covered with vegetation; rare; 323	King et al.	1960
	Flood pools of rivers, rain-filled ground pocls;; 323	Lowry	1929
	Flood pools of river, forest pools;; 323	Dyar	1928
	In words, temporary creek;; 323	Lickir son	1944
	Swampy area;; 323	Knurson	1943
	Exposed pools;; 323	Headlee	1945
	Tree holes;; 323	Scearns et al.	1933
	; early spring, really bites during the day when their resting places in wooded areas are invaded, persistent bite is the most painful, light traps; 323°	Cate &	1944
	; bites both in shade and open; 323	Owen	1937
	;; 323 (Associated with floodwater)	Matneson	1944
varipalpue (Coquillett)	Rain-filled tree holes, artificial containers; May-Aug., fairly common; 62°	Hearle	1925
	; forests; 62	ûyar	1920
	;; 52, 323 (bite day and night)	Dyar	1928
	;: 62 (Enter houses)	Matheson	1944
	Tree holes, rock holes and wooden receptacles under trees, may be found in mid-winter; experimental vector of western eq.ine encaphalomyelitis, vicious biter, abundant; 323*	Stage et al.	1952
	Rain barrels containing decaying leaves; occasionally enters houses; 323	Freeborn & bonart	1951

TABLE 1 - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
AEDES ventrovittis Dyar	Pools in mountain meadows at high elevations; rare; 323	Stage et ai.	1952
	Pools with frozen edges and surrounded by snow banks;; 323	Freeborn & Bohart	1951
	Early spring pools;; 323	Matheson	1944
	; bites by day in mountain meadows and woods. June-Aug.; 323°	Dyar	1922
vezans (Meigen)	Flood pools in meadows and open places, temporary swamps, roadside ditches, flooded sumac prairies, cottonwood swamps; attracted to lights, very abundant; 62	Hearle	1925
	Shallow pasture depressions of the open prairie, semi-permanent marshy areas; possible vector of western equine encephatom elitis; 62	Rempel	1953
	Irrigated areas, temporary pools with alkaline water; rest in shelter belts and tall vegetation, May-Sept.; 62	Shemanchuk	1959
	Woods, open pools, ruts; grass, houses; 62	McLintock	1944
	Flocied meadows and open places;; 62	Twinn	1949
	; common, 62. Foul roadside pools, hog wallows, river banks, low-lying depressions; serious pest in towns and cities; 323 (Rain pools in meadows and open marshes, foul roadside puddles, abundant in filthy pools around city dumps, hog wallows, occasionally in clear woodland pools, permanent swamp pools)	Matheson	1944
	; persistent biter; 62°;; 323 (Any small body of standing water, in woods or in the open, enter houses in the evening, attracted to light, troublesome biters)	Steward & McWade	1961
	and flood water, experimental transmission of eastern, western equine encephalitis and St. Louis encephalitis, bites in shady places by day and after dark)	Carpenter et al.	1946
	Contaminated and fresh water, rain pools, flood water seepage and surplus water from irrigation, temporary pools in open pasture; feed in the shade during the day, especially annoying at dusk and early evening, can transmit both St. Louis encephalitis and western equine encephalomyelitis; 323		1944

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
AEDES vexans (Meigen) (cont.)	Irrigated and flood water areas at sea level and mountain meadows, overflow areas and bottom lands of rivers; enter houses at dark, most important pest, naturally infected with western equine encephalomyelitis and experimentally infected with St. Louis encephalitis virus, very abundant; 323°	Stage et al.	1952
	Surface pools, streams in the mountains and plain regions along the margins of streams in the lower river valleys, in all parts where irrigation is practiced; in wooded regions during the day, attracted to light; 323	Rees	1943
	Temporary rain pools with some decaying vegetation, semi-permanent and permanent ponds, marsnes, woodland pools, cold forest pools, foul and stagnant puddles, natural standing water; abundant in May; 323	jven	1937
	Flood plains of rivers and stream; in light traps, experimental vector of eastern equine and St. Louis encephalitis; 323	Kig et al.	1960
	Woodland and open swamp pools and temporary pools in pasture land; soldom enters houses, may be very troublesome; 323	Кошр	1923
	Overflow pools along wooded streams, in flooded borrow pits; foothills, plains, irrigated farming regions; 323	Harmston	1949
	Permanent cramberry bogs, swimps and upland pools; experimental ransmission of equine encephalomyelitis; 323	Knutson	1943
	Temporary pond situations, many types of rain- pools flooded edges of marshes; common; 323	Ross	1947
	Flood water of woodland water course, open sunny marshes rain-filled road ruts;; 323	Freeborn & Bohart	1951
	Temporary ground pools, semi-permanent pools. flood or seepage, open, sunlit pools, readside ditches, flooded meadows;; 323	Mail	1934
	Common in frash-water, polluted and unpolluted water, margin of salt marsh;; 323	Darsie et al.	1951
	Permanent swamp pools, deep shaded pool on mat:; 323	Irwin	1943

TABLE 1 - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
AEDES Se <b>xa</b> ns	Surface water, put hole, ditch, marsh;; 323	Bick	1946
(Meigen) (cont.)	Polluted cat-tail swamps, clean woodland pools;; 323	Stearns et al.	1933
	Ditch of flower bed in garden;; 323	Beyer	1923
	Foul, stagnant pools contaminated with sewage;: 323	: Olson & Keegan	1944
	Septic tanks, ruts, furnace pits;; 323	Shields	1938
	Woodland pool;; 323	Breland	1947
	; possible vector of encephalitis; 323	Edman	1964
	; JanNov.; 323	Wirth	1947
	; lake area; 323	Quinby	1941
	; light traps; 327	Twing	1944
zoösoprus Dyar & Knab	;; 323	Stone	1965
ANOPHEUES albirurus Wiedemann	Any collection of sunlit fresh or brackish water, pure or stagnant, lakes and canals covered with vegetation; invade houses at night and leave before sunrise, naturally and experimentally infected with Flasmodium vivax and F. falcipurar; 323	Carpenter et al.	1946
	In seepage water, hoofprints, wheel ruts, ground prols with algae and artificial containers with floating plants;; 323	ratheson	1944
	—-; enter buildings at night to bite, in forested areas by day, SeptJan., rare; 323*°	King et al.	1960
	; possible transmitter or malaria; 323°	McGregor & Eads	1943
	; light traps, May: 323	Carpenter	1949
argyritarsis Robineau- Desvoidy	;; 323	Root	1922
atropos Dyar & Knab	Permanent salt pools, shallow water and alluvial marshes; enter houses, bites man in bright sunlight and by night, experimentally infected with Plasmodium vivam; 323°	Matheson	19

TAELD 1 - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (SENFRAL STATEMENTS)	AUTHOR	DATE
	(SEMERAL STATEMENTS)	AUINA	DAIL
ANOPHELES atropos	Salt water of coastal marshes; in light traps, experimentally infected with malaria, rare; 323	King et al.	1960
Dyar & Knab (cont.)	Soft mud, salt water; coast, suspected rector of maiaria; 323	Beyer	1923
	Grass-grown margins of pools on the edge of salt marshes;: 323	Bisho	1933
	Shallow, tidal waters of mangrove swamps;, 323	cchard c al.	1947
	Abandoned brackish cistern;; 323	Fisk	1938
	; FebDec.; 323	Carpenter & Chamberlain	1946
aztecus Hoffmann	;; 323	Raker & Kitzmiller	1963
barberi Coquillett	Wooden tubs; sect in tree coles, nearby houses and other shelders, attracted to light, proved susceptible to insection with malaria, all year, rare; 323	King et al.	1960
	Rol cavities in trees, stump holes, artificial containers near wooded area, sometimes hibernates frozen in ice; ——; 323	Gerhardt	1966
	Tree noies, highly polluted sumps in manure pits, artificial containers contaminated with leaves, humus and other organic materials, hibernates frozen in ice of tree holes;; 323	Eoyd	1949
	; experimentally infected with Plasmodium vivax, 323	Carpenter et al.	1946
	: readfly bites man stransuit Plasmodium proum; 323"	Matheson	1944
	: enter houses, persister>r. rare. 323°	ding et al.	פֿירן
boyai Vargas	;; 32?	ಕ್ಕೆ ಶಕ್ಷಕ	1939
irail-i King	Brackish water pear MAST and waters with less salt, roadside ditches with much Phara and other plants, salt-march pools with flotage, algae and grasses; rare; 3/3	King et al.	1:65
	Saline waters with vegetation; experimentally infected with Plasmodium falcipamon; 323	Matheson	1944

٠,

TABLE 1 - MOSOUITOES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
ANJPHELES bradleyi	Surtace water, pothole, ditch, artificial container; diurnal; 323	Bick	1946
King (vont.)	; April-Dec.; 323	Carpenter & Chamberlain	1946
crucians Wiedemann	Acid-water, dense cypress swamps and coastal plains, ponds, impoundments, blocked streams and meadow swales, wheel ruts, temporary pools in pine barren and other nonvegetated accumulation of water; probable malaria vector, principal carrier of malaria in some areas; 323	Boyd	1349
	Acid or alkaling waters of ponds, lakes, pools, permanent or temporary swamps with vegetation or debris, wheel ruts, temporary pools in pine barrens; in light traps, susceptible to infection with malaria, infected with eastern equine encephalitis, common; 323	King et al.	1360
	Ponds, lake margins, swamps, and pools, acid water in cypress swamps; experimentally infected wit. Plosmodium vivax and P. falciparum, naturally infected with malaria, bires man in sunlight and in shade; 323*	Matheson	1544
	Slightly brackish water with very dense vegetation fresh water; bites man indoors, considered to be an important carrier of malaria; 323*	, Stearns et al.	.933
	Salt marsh; domestic: 323	Headlee	1945
	Ground pools mear the coast; dangerous malaria carries; 323	Jyar	19
	Grassy brackish swamp of 1 by springs which contain iron, sulphur, 1 various alkalis, in suade or partry exposed to the sun, in irrigation dutches and 1-rge canals with vegetation and a constant less of water;; 323	Barber	1939
	Large lily pends with dirt banks, old borrow pits bordered by vegetation, unshaded pends containing or bordered by vegetation;; 323	Good	1345
	Amongst vegetation and floatage in impoundments, in grassy, semi-permanent rain pools; abundant in artificial reservoirs;; 3	ಸಿಂತಕರಿಂತ	1942
	Personent pools with water hyacinth Floropus orassipes;; 323	Hirman	1905

(cene.)	; experimentally infected with St. Louis encephalitis; 323	Chamberlain et al.	1964 a
	; bites sucdoors at right, in woods by day; 323	King et al.	1939
	; soldom transmits malarla in nature; 323	Котр	1923
	; abundant in the coastal area; 323	Caisie et al.	1951
	; possibly transmits malaria: 323	McGregor & Eads	19 3
	; well shaled driftwood; 323	Shields	1938
	; all year; 323	Wirth	1947
erucions bradk ji King	In pools of brackish water, near the coast, in fresh water; experimentally infected with Plasmocium "alciparum; 323	Carpencer et al.	1946
	; J-r d Sept.; 323	Carpenter & Chamberlain	1946
erucians erweians Wiedemann	Swamps, points and lakes, also in acid waters in cypress swamps; enters houses, experimentally infected with Plasmodium vivax and P. falciparum, attracted to light traps, bites by might outdoors: 323°	Carpenter et al.	1946
	; all year; 323	Carpenter & Chamberlain	1946
eruciar georgianus Ling	Acid side-hill seepage puddles characteristic of cut over long leaf pine inland;; 32?	Wirth	1947
<sup>(18</sup>	Seepage pools in small streams and at the bases of hills;; 323	Carpenter et ai.	1946
	; Jan., Ayril-Sent., Nov.; 323	Carpenter & Chamberlain	1946
olmbîî Dyar & Khab	: 323	Root	1922
ecrlei Vargas	Pools and pools along lake shores that are permanent or dry for only a short time during late summer; active May and June; 5	Gjullin et al.	1961

TABLE 1 - MOSQUITOES (continued)

SPECURS	BREEDING HABITATS; ADUIT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
ANOPHELES earlei Vargas (coit.)	;; 5, 323; flying in houses in Dec., June-Oct.; 62 (Woodland pools, open bogs, margins of permanent and semi-permanent pools and roadside puddles, females hiberrate in buildings and houses, sometimes found as early as March)	Steward & MoWale	1961
	Irrigated areas, roadside ditches, field pends overgrown with vegetation, shaded portions of pools with rich organic matter and algae, sluggish streams with marginal vegetation growth;: 62	Shemanchuk	1959
	; enter houses during winter and early spring, May; 62°	Rempel	1953
	Cold clear mater in shallow margins of semi- permanent and permanent ponds overgrown with emergent vegication, woodland pools, marshes, open bogs, largins of sluggish streams; very aggressive: 323	Gerhardt	1966
	Margins of canal with thick floating and exergent vegetation in clear very cold water of 16°C, low marshy seepage area, small semipermanent ponds; active at dusk in cold weather, July; 323	Rozebcom	1951
	; invade houses, bite man in the bright sun- light, feed on man at all hours during the night; 323°	Pratt	1952
	; AugSapt.; 323	Fellton et al.	1950
eiseni Coquillett	;; 323	Roct	1922
fazardor Lutz	<del>;;</del> 323	Root	1922
f. merisoanus Modiniken	Sumlit pools along the courses of receding streems, common in the mats of given algae;; 323	Marneson	1944
	, July-Sept.; 323	Harmston	1745
ှာဖေည်းကျေ Aitken	surfaces exposed to sunlight with some transient shade produced by floatage, emergent vegetation or algae, warm water, slightly alkaline clean veter, brackish water, desert pools, seldom in polluted water, up to 7000 feet elevation; shelter in outbuildings, homes, cellars and similar locations, bites avidly at dusk and dwm also by day, currier of malaria, can transmit malaria in the winter in heated rooms; 323°		<u> </u>

TABLE 1 - MOSQUITUES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
ANOPHELES fix soomi Aitken (nont.)	Clean sunny water, irrigated areas, river margins, creeks and irrigation ditches, ponds, sloughs and roadside ditches, hibernate in root cellars, barns, cutbuildings and other sheltered locations, naturally infected with western equine encephalomyelitis, Feb., April; 323	et al.	1952
	Shallow pools of clear water containing mats of green algae or floating Lemma; plains and prairie regions, low mountain valleys, abundant, most important vector of malaria, May-Oct.; 323*	Rees	1943
	Irrigated hay fields, rice fields, snaded fresh, clear, cool, seepage water; experimentally infected with <i>Plasmodium viva</i> r and naturally infected with maleria; 323	Matheson	1944
	; possible vector of malaria; 323	Fratt	1952
georgianus King	Pond, shallow seepage water at head of basili stream, small puddles with algae and grassy edges; rare; 323	King et al.	1960
	Shallow, small secreage depressions in boggy side hills or swales, outlets of seepage water, hoofurints, favored by pitcher plant, Sarrage has purposea; —-; 323	Boyd	1949
	Fresh water;; 323	King et al.	1939
	; ali year; 323	Carpenter & Chamberlain	1946
grabharia Theobald	;; s <del>2</del> 3	Roct	1922
luczó Truz	;; 323	Root	1922
rzowi ipermie Meigen	;; 5, 62, 323 (Small, permanent sunny pools with algae, standing irrigation water, considered the principal vector of molaria)	Dyar	1928
	Cottonwood flood-swamps. Ehallow pools under willow growth and permanent swamps and pools; nocturnal, fairly rare; 62	Kearle	1926
	Edges of creeks and permanent sloughs; houses, barns; 62	McLintock	1946
	; carrier of malaria; 6%	Twinn	1326a
	; March-Sept.; 62	Hearle	1927
	;; 62 (Temporary water puddles)	Dyar	1922

TABLE 1 - MOSQUITOES (continued)

SPLCIES	BREEDING HARITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
ANOPHELES maculipennis Meigen (cont.)	Shallow sumlit pools of clear water with green algae mats, hoofprints, wayside pools, neglected irrigation and drainage ditches; seepage areas; overwinter in and about dwellings, up to 5,438 feet altitude, experimental vector of tertian, subtertian and quartan malaria, all year, peak Sept; 323*°	Freeborn	1926
	Grassy swamps, open pastures fed by irrigation water, irrigation ditches with vegetation and in constant level of water, in cold mineral springs: enter houses, carrier of malaria, common in summer and early autumn; 323	Barber	1939
	Permanent pools; wooded area where shaded, algaefilled pools are numerous, arid plains; 323	Mail	1934
	Semi-permanent and permanent ponds along shore- line with aquatic plants and algae, temporary rain pools, woodland rools, marshes, open bogs, shoreline of streams;; 323	0wen	1937
	Ponded areas bordering streams in wooded and open country, containing some marginal and aquatic floating plants;; 323	Rowe	1942
	Natural pools, margins of mud, lake and bog, mat pools, permanent swamp and beach pools;; 323	Irwin	1943
maculipermis freeborni Aitken	<del>;</del> ; 62*, 323*	Geigy & Herbig	1955
Altken	Small fresh-water pools, partly exposed to sunlight with algae, hoofprints in seepage areas, bays in moving stream margins, cut-off and semi-permanent pools; enters houses, vicious indoor biter; 323°	Freeborn & Brookman	1943
maculípernis occidentalis Dyar & Knab	; rare; 5	Stage & Chamberlin	1945
	Fresh water among algae mats;; 323*	Freeborn & Brookman	1943
neivai Dyar & Knab	;; 342	Root	1922
occidentalis Dyar & K-ab	;; 5, 62. Permanent and semi-permanent vater surfaces exposed to sunlight with shade, produced by floatage, emergent vegetation or algae, warm water, slightly alkaline clean water, brackish water, seldom in polluted water; valleys; 323 (Efficient experimental vector of malaria)	Boyd	1949

TABLE 1 - MOSQUITOES (cortinued)

SPECIES	BRLEDING H-BITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
naCPHELES cocidentalis Dyar & Knab (cont.)	;; 5, 62, 323 (Grassy margins of lakes, in slow streams with vegetation, fierce biters, attack usually during twilight hours, overwintering females attack in bright sunlight)	Matheson	1944
	Pond filled with refuse, weed, cattails, sedges, and algae; light trap; 6?	Twinn	1944
	Shore of sluggish, overgrown stream; wooded areas; 62	Rempel	1950
	Roadside ditches, alder-swamps; common; 62	Hearle	1921
	;; 62 (Puddles, prefers permanent waters)	Dyar	1921
	Rice fields; naturally infected with malaria, March and April; 323	Freeborn	1917
	Open grassy pools; rare; 323	Stage et al.	1952
	River bottom; along creek, in cabin; 323	Parker	1916
	Swamp waters; June-Nov.; 323	Dickinson	1944
	; seldom bites man; 323°	Pratt	1952
occidertalis freeborni Aitken	;; 323	Bates	1949
occidentalis occidentalis Dyar & Knab	;; 62, 323	Bates	1949
parvas Chagas	;; 323	Root	1922
perplexers Ludlow	Margins of streams from limestone springs; rare; 323	King et al.	1960
plumbeus Stephens	Concealed places, artificial containers, tree holes;; 126	Shtakelberg	1925
pseudopunctipernis Theobald	Grassy brackish swamps, large canals and irrigation ditches with vegetation and constant level of water, in cold, fresh and bitter mineral springs, exposed or partly shaded in the sun, in seepages, ponds, riverbeds and streams; possible vector of malaria, Sept.; 323	Barber	1939

TABLE 1 - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS; AU T ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
ANOPHELES  rseudopunctipennis  Theobald (cont.)	Clear sunlit pools with algae, vegetated margins of slow-flowing streams; enter houses, bite readily, experimentally infected with Plasmodium vivax and P. falciparum, rete; 323°	King et al.	1960
	Wayside sunlit pools, foul vaters; seldom enters habitations, experimentally infected with subtertian malaria; 323	Freeborn	1926
	In sandy river bed with algae;; 323	Rozeboom	1942
	River valley;; 323	King et al.	1439
	Ricefields;; 323	Freeborn	1917
	; Oct.; 323	Wirth	1947
rseudopunctipernis franciscanus McCracken	;; 62*, 323*	Geigy & Herbig	1955
coracker	Open springs and spring-fed pools and seep areas adjacent to foothills, at 5,495 feet elevation; OctMarch and May-Aug.; 323°	Chapman	1966
	Shallow pool at the edge of receding stream with abundant growth of algae in Tolkest Junlight, artificial containers, brackish w ter;; 323	Freeborn & Bohart	1951
	; rare; 323	Stage et al.	1952
pseudopunctipennis pseudopunctipennis Theobald	Clear sumlit water, rich in algae; et alouses and bites man, naturally and experimentally infected with Plasmodium vivax and aloiparv 323*°	Carpenter et al.	1946
punctimacula Dyar & Knab	;; 323	loot	1922
punctipennis (Say)	Roadside ditches, surface pools contonwood flood swamps, permanent swamps, rain-filled cools, open depressions in meadows; hibernace in callers, out-houses and caves, fairly rare, 62°	Hearle	1926

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
ANOPHELES  punctipennis  (SJy)	Log pools in the backwaters of the river, among wild rice in river margins, in a sedge-grown lily pool, cattail marsh;; 62	Twinn	1944
(cont.)	Pends;; 62	McLintock	1944
	; March-Aug.; 62	Hearie	1927
	o;; 62; at 1200 feet elevation or over, grassy areas; 323 (Rain water barrels, roadside puddles, muddy road ruts, grassy bogs, swamps, hog wallows, spring pools, stream margine, lakes and open ponds)	Matheson	1944
	,; 62;; 323 (Large pools, small rain puddles, rain barrels and artificial containers, seldom in buildings in summer, hibernates in buildings and hollow trees, bite anytime mostly in early evening)	Steward & McWade	1961
	;; 62, 323 (All sort water puddles, in permanent water, a dangerous malaria carrier, active after sunset)	Dyar	1922
	;; 62 (Ground pools)	Dyar	1928
	Flowing stream margins, wells, deep lime sinks, containers, clay borrow pits, pools without vegetation; bite mostly at night and in dense shade or on cloudy days, in barns, outhouses and in houses, more common in late fall and early spring, rare; 323°	King et al.	1960
	Marshes, swamps, pends and pond holes, mill ponds, lake margins, pigpens, horse and cow tracks in wet ground, overflow or rain water, running waters, creek and streams, drainage ditches; experimentally infected with malaria, highly susceptible to Plasmodium vivax; 323	·	1946
	Running streams, backwaters of lakes, cattail marshes, densely wooded cypress swamps, open and almost barren pools, open sualit waters and densely shaded situations; experimentally infected with malaria; 323	Ross	1947
	Along the margins of streams; seldom enters houses, tites after dusk and during daylight in dense we dlands, experimentally infected with Plasmocium vivam, P. falciparum and P. malariae; 323	Carpenter et al.	1946
	Swampy areas, ground pools of various kinds, transient rain puddles; domestic, common, bite at dusk, in houses during winter; 323	Lowry	1929

TABLE 1 - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
NOTHELES ; unotifiennis (Say) (cont.)	Pools and eddies in drying stream in sunlight with mats of green algae, shallow mountain streams; overwinter in caves, houses and other chalters; 323	Gerhardt	1966
	Pools in tangled wooded sections, cool, clear, shaded with limited exposure to sunlight; bite in open, experimental vector of tertian malaria; 323	Freeborn	1926
	Swift streams with fringe vegetation; under rock ledges, bridges, hollow trees; 323	Shields	1938
	Stream pool; suspected vector of malaria; 323	Rozetoom	1942
	Woods, open pools; peak May-Nov.; 323	Horsiall	1936
	Natural and mat pools, lakeward edges of mat; rare; 323	Irvin	1943
	Almost all types of watered areas including temporary rain pools, pasture potholes, artificial containers and shallow sheet flood water, grass-covered borders of small pasture streams, rocky or sandy pools in the beds of larger creeks;; 323	Rowe	1942
	Grassy swamps, large canals and irrigation ditches with overlanging vegetation and in constant level with water, in cooler water, either smaded or fed by cold springs;; 323	Barser	1939
	Any standing water except in artificial receptacles, permanent and temporary vater, open pools, ditches, meadows, prefer shaded woodland pools;; 323	Beadle	1952
	Margins of flowing streams, small clay borrow pits or pools without vegetation, seepage out-crop;; 323	King et al.	1939
	Slow-moving, grass bordered streams, stagmant pools, roadside ditches and pond margins;: 323	Darsie et al.	1951
	Foul, stagnant pool convaminated with sewage, potholes;; 323	Olson & Keegan	1944
	Fresh water, salt marsh and swampy areas inland;; 323	Headles	1945
	Woodland creek pocls;; 323	Freeborn & Bohart	1951
	; experimentally infected with Wichereria benarofit; 323	Eylas & Most	<u>;</u> 9-7

TABLE 1 - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
ANOPHELES punctipennis	; possibly transmits malaria; 323	McGregor & Eads	1943
(Say) (cont.)	; only enters empty houses; 323	Komp	1923
	; light traps; 323	Edman & Downe	1964
	; all year; 323	Fellton et al.	1950
	;; 323*	Knutson	1943
quadrimaculatus	; March-Sept.; 62	Hearle	1927
Say	;; 62, 323 (Fresh water in sluggish streams, canals, ponds and lakes with surface growings or emergent vegetation or floating debris, naturally and experimentally infected with <i>Plaemodium vivax</i> , P. falaparum and P. malariae, bites man at night, enters houses, in dark corners, in buildings, underneath houses, in hollow trees and other shelters during daylight bours)	Carpenter et al.	1946
	;; 62 (Lake margins, swamps, water collections of permanent nature where aquatic vegetation or swrface debris is abundant, occurs more extensively in open sunlit waters, cool, clean water, bites man, most common vector of malaria)	Vargas	1950
	on lake surface, puddles and temporary pools, bite chiefly at dawn and dusk, rest in shade)	Steward & McWade	1961
	Ponds, midstreams along leaves of plants with current moving leaves, marshes, swamps, pond holes, mill ponds, lake margins, garden pools, pigpens. hosfprints, overflow or rain waters, river banks, creeks, drainage ditches, springs, standing and running water; naturally and experimentally infected with malaria; 323°	Sabresky	1946
	Ricefields, ditches, pools, swamps that are more or less permanent with abundant vegetation or surface debris, prefer partly shaded water, cool and clean without debris; in light traps and houses, most common, all year, peak June-Sett; 323	Horsfall	1942

cubersis Bigot	Old vat on wnarf, drain water in a cellar, pools in streambed, artificial containers; nuisance at night, common; 323°	Dyar	1907
deolarator Dyar & Knab	;; 323 (Treeboles, small, usually dirty ground pools, rockholes)	Dyar	1928
degustator Dysr	; open woods, garden, gutter, nocturnal, Feb., Aug.; 323	Beyer	1923
	; June, 323	Dyar	1922
<i>discolor</i> Coquillett	; June-Aug., rare; 323	Felt	1904
impreei Coquillett	Woodland pool; July-Sept.; 323	Felt	1904
dyari Coquillett	Slow cold stream in woods; May; 62. Cold permanent spring;; 323	Felt	1904
egberti Dyar & Knab	Permanent water containing grass and other vegetation; Jan., July, Aug., Oct. and Nov.; 323	Dyar	1922
<i>elevator</i> Dyar & Knab	;; 323	Pritchard et al.	1947
erriticus (Cyar & Knab)	Grassy permanent ponds and swampy areas with Lerca, ricefields, ponds with cattail and water primrose; outdoors at night, bite all day in some areas, light traps, common; 323°	King et al.	1960
	Permanent bodies of water with vegetation; bites in woods by the margins of ponds and streams; 323	Dyar	1922
	Hollow log.; and stumps, ground pools in river boctom, cypress brakes, severe biter; 323	Dyar	1928
	$\hat{\omega}_{mmon}$ in impoundments; occasionally bites man 323	Rozeboom	1942

TABLE 1 - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
CULEX	Permanent waters of duckweed; enter houses; 323	Котр	1923
erraticus (Dyar & Knab) (cont.)	Permanent ponds supporting growth of aquatic floating plants, usually in shaded areas;; 323	Rowe	1942
	Sewage-polluted water, stream bed, temporary floating-plant debris;; 323	Darsie et al.	1951
	Pothole;; 323	Bick	19∓6
	; prevalent whenever bright daylight is reduced, bites as twilight nears; 323	Quinby	1941
	; experimentally infected with Whichereria bancrofti; 323	Eyles & Most	1947
	; March-Jan.; 323	Carpenter & Chamberlain	1946
erythrothorax Dyar	Permanent seepage pools along creeks with luxuriant growth of Typha and Scirpus; in light trans; 323	Menzies et al.	1955
	Open permanent ponds and springs with Scirpus olnesi and tule; hite all day, all year; j23	Chapman	1966
	Large tule pools, great abundance in tule swamp where red-winged blackbirds congregated;; 323°	Freeborn & Bohart	1951
	Long standing or permanent ponds with vegetation; 323	Dyar	1922
	Large shallow pools;; 323	Matheson	1944
fatigæns Wiedemann	; raturally infected with *uchereria barcrofti; 323	Manson-Bahr	1959
federalis Dyar	Heavily tule shaded pool of sewe: farm;: 323	Herms	1934
fitchii Felt & Young	Permanent woodland pool; May, 323	Felt	1904
floricanus Dy & Knab	Permanent water with vegetation; July-Aug., Dec., rare; 323	Dyar	1922

BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION		
SPECIES (GENERAL STATEMENTS)	AUTHOR	DATE
CULLX hombeopas; Oct.; 323 Theotold	Dyar	1922
walter 323; 5, 62. Woodland pools; May, common;	Felt	1904
inhibitator Grassy pools; June-July; 323 Dyar & Knab	Horsfall	1936
interrojator;; 323 Dyar & knab	Stone	1965
Dya-  Brackish water and roadside pool, pools among aerial roots of black mangrove; attracted to light traps, rest on tree trunks and decaying branches, rare; 323	King et al.	1960
Mangrove swamp, 11ms of small pond;; 323	Pratt & Seabrook	1952
immaiornsis Rain and mud pools, open sewer drain;; 323 Theobald	Felt	1904
lazarensis Deep cold mountain pool; May and June; 323 Felt & Young	Felt	1904
ragnipennis Shaded pool; Aug.; 323 Felt	Felt	1904
relanurus; 62, 351 (Small collections of permanent water in swamps, passing the winter as full-grown larvae under the ice, rare)	Dyar Dyar	1921
Cold spring pools in Sphaanum swamps; early Aug., summer; 323	. Headlee	1945
**Rulrernani** Potholes, man-made well in limestone formation; Basham limestone solution holes, in light traps, rare; 323	King et al.	1960
nemorosus;; 62 Meigen	Felt	1904
nigripalpus Fresh-water marshes; attracted to light traps, Theobald common; 323°	King et al.	1960
Ditches, grassy pools, street catch basins, artificial containers; in houses, rare; 323	King et al.	1939
Highly organic waters; experimental transmission of St. Louis encephalitis; 323	Sudia & Chamberlain	1964
Pothole; diurnal; 323	Bick	1946

	Permanent stagnant ground pools;; 323	Lowry	1929

			70.4
SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
CULICELLA mascrackenae Dyar & Knab	;; 323 (Old stagnant permanent pools, rare)	Dyar	1928
าอไทนาล (Coquillett)	Cold springs or permanent bog pools; rare, Aug., Sept.; 323	Lowry	1929
	Springs and spring-fed pools, cold bogs; May, June; 323	Dickinson	1944
	;; 323*	Beadle	1952
parodites Dyar	; May, June and July; 323	Dyar	1928
SULISETA alaskaensis (Ludlow)	Common in Carea swamps, edges of pools and ponds, coastal marshes with vegetation usually open and unshaded; bites all day; 5°	Rempel	1953
	Shallow semi-permanent or permanent pools clogged with debris and vegetation; forested lowland, May-June; 5	Gjullin et al.	1961
	Dystrophic ponds within bogs, dense clumps of dead Carex;; 5	Frohne	1956
	Permanent, long standing water, fresh water marsh, bog;; 5	Frohne	1954
	; sheltered and shaded niches and crevices on cliffs and on the underside of boulders; 5	Sommerman	1964
	; hibernate below snow in clumps of Clamagrostris grass; 5	Hopla	1965
	; April-Sept.; 5	Stage & Chamberlain	1945
	;; 5, 62, 323 (In late spring and summer in open pools, riverbeds)	Steward & McWade	1961
	Grassy pools along riverbeds; plains; 62	Dyar	1920
	Irrigated areas;; 62	Shemanchuk	1959
	; open rocky country and moist spruce forests up to 1000 feet elevation, day biter; 62	Jenkins & Knight	1950
	; bites in swampy forest, bite by day and early evening; $62^{\circ}$	Twinn et al.	1948

TABLE 1 - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS; ADUL: ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHGR	DATE
SULISETA alaskaensis (Ludlow) (cont.)	; April-July; 62;; 323 (Grassy marshes, generally in river valleys, adults pass winter hiding in hollow logs and appear very early in the spring, bite man)	Dyar	1921
	; very rare; 62	Hearle	1926
	; Hay; 323	Dyar	1929
	; light traps; 327	Twinn	1944
igairí Coquillett	; May-July; 62;, 351 (In the spring in cold bogs, males attracted to light)	Dyar	192!
	Spring in cold bogs; readily attracted to lights, May, July-Aug.; 323	Dyar	1922
impatiens (Walker)	Dystrophic ponds within bogs, dense clumps of dead Carex; will bite at near freezing temperatures in early spring, frisking on the wing and resting on the snow, JanMarch; 5°	Frohne	1956
	Semi-permanent or permanent pools;; 5	Gjullin et al.	1961
	Bog pools; —; 5	Frohne	1954
	; sheltered and shaded niches and crevices on the cliff, underside of boulder; 5	Sommerman	1964
	; AprSept.; 5	Stage & Chamberlain	1945
	;; 5, 62, 323 (Snow pools, ponds, and roadside puddles, March-early autumn, bite readily all day)	Steward & McWade	1961
	Dark permanent forest pools, shallow pools beside railroad tracks, dirty roadside pools; wooded mountain slopes, fairly common; 62	Hearle	1926
	; feeds at dusk and vicious biter by day, but not in strong wind, May; 62°. Dark permanent forest pools, muddy water in road ruts; common from coast to coast; 323°	Rempel	1953
	; in white spruce-lichen and spruce-moss forests up to 700 feet elevation; 62	Jenkins & Knight	1950
	; May-Aug.; 62	Dyar	1920

TABLE 1 - MOSQUITOES (continued)

SPECIES	SREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	LATE
CULISETA impatiens (Walker)	Snaded spring or snow-fed pools; rare in some areas; 323	Stage et al.	1952
(cont.)	Dark, clear, woodland pools; fly after sunset; 323	Matheson	1944
	; May-Aug.; 323	Harmston	1949
	; Sept.; 323	Blickle	1952
	; common, 323	Parker	1916
incidens (Thomson)	; May-June; 5	Stage & Chamberlain	1945
	; rare; 5	Frohne	1956
	;; 5, 62, 323 (Dirty, permanent pools, artificial containers, rarely bites man)	Dyar	1921
	;; 5, 323 (Permanent pools, all year, hibernates as adults)	Matheson	1944
	Domestic, rainwater barrels, dirty salt-water pools, filthy ditches, ponds, clean woodland pools, open sloughs, rain-filled depressions in woods, edges of cottonwood flood swamps; hibernate in sheltered places, indoors, March and April, abundant; 62°	Hearle	1926
	Artificial pools or barrels; coastal regions, May-Sept.; 62	Dyar	1920
	Artificial containers; rarely bites man; 62	Rempel	1953
	Permanent and semi-permanent pools, artificial containers; experimentally infected with western equine encephalomyelitis, St. Louis and Japanese B encephalitis, abundant; 323	Stage et al.	1952
	Horse troughs; lower elevations and up to 8,000 feet; 323	Freeborn & Brookman	1943
	Permanent dirty pools; adults hibernate; 323	Dyar	1922
	Brackish water, spring water and snow pools in the mountains;; 323°	Freeborn & Bohart	1951
	; experimental transmission of Japanese B encephalitis; 323	Hammon et al.	1949
	; May, July-Sept.; 323	Harmston	1949

TABLE 1 - MOSQUITOES (continued)

SPECIES	DEFEDING HAB:TATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
SULISETA inornata (Williston)	Shallow grassy depressions, amongst slough grass and wild barley, in stagnant highly alkaline water with sedges and bulrush, also in clear water depressions with clay bottom; enter houses in the fall to hibernate, potential vector of western equine encephalomyelitis and St. Louis encephalitis; 62	Rempel	1953
	Irrigated areas, pools, seepage pools of main canal, laterals and supply ditches; in visual-attraction traps, possible vector of western equine encephalitis, May-Sept. and Nov.; 62°	Shemanchuk	1959
	Roadside pools, edges of cottonwood flood swamps, permanent water pools, streambeds, artificial containers; fairly common; 62	Hearle	1926
	Weedy roadside ditches temporarily filled with water, grassy pasture depressions, semipermanent depressions in bluffs, permanent depressions in partly dried-up streambeds;; 62	Rempel	1950
	; Oct.; 62 (Permanent ground pools)	Dyar	1921
	;; 62. Brackish coastal water;; 323 (Rarely bite man)	Steward & McWade	1961
	Poorly drained irrigated areas, shaded pools in forests up to 6000 feet elevation; naturally infected with western equine encephalomyelitis, experimental vector of St. Louis and Japanese B encephalitis, abundant; 323°	Stage et al.	1952
	Open grassy pools, lily ponds and polluted water, swampy areas; bites man occasionally, light trap, July-Sept., experimental transmission of western equine and St. Louis encephalitis; 323	Tate & Gates	1944
	Margins of ponds and permanent pools; numerous at times, very frequently enters houses, rarely bites man; 323	Beyer	1923
	Karshes, sinkholes, stump holes and artificial ponds; overwinter in houses and bite fercciously; 323	Ross	1947
	Open grassy pools, ditches, marshes, artificial containers; bite mostly evening and night, commen; 323°	king et al.	1960
	Shaded, semi-permanent roadside pool;; 323	Darsie et al.	1951

TABLE 1 - MOSQUITGES (centinwed)

CDECIEC	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	ATTERNS	DATE
SPECIES	(GENDRAL PIRICENIS)	AUTHOR	DAIL
CULISETA	Ex inct hot springs;; 323	Dyar	1923
inormata (Williston)	Wet meadow;; 323	Lake	1953
(cont.)	; below 8000 feet elevation; 323	Harmstor	1949
	; SeptJune; 323	Carpenter & Chomberlain	1946
maccrackenae Dyar & Knab	; rare; 5	Frohne	1956
Dyar & Khab	Pools overgrown with vegetation; rare; 323	Stage et al.	1952
	Pools in streambeds with vegetation;; 323	iyar	1322
	Cool, clear pools in deep shade;; 323°	Freeborn & Bohart	1951
	Wooded and coastal regions;; 323	Matheson	1944
≈lanura (Coquillett)	;; 62, 323 (Permanent water in swamps. overwinters under the ice)	Matheson	1944
	Small permanent water collections with or without vegetation, around bases of trees and stumps, open pools in muck lands, small grassy ponds of dark acid water in wooden awamp, spring water in sphagnum bog; sylvan, attracted to light traps, rare; 323	King et al.	1960
	Sphagrum bogs and cedar swamps, shady, cool, acid water in permanent fresh-water swamps; possible vector of equine encephalitis; 323	Wallis	1960
	Artificial containers; diurnal; 323	Bick	1946
	Fresh water pond, occasionally cranberry bog;; 323	Bast	1963
	Shaded, roadside pool;; 323	Darsie et al.	1951
	; naturally infected with eastern equire encephalitis; 323	Beadle	1952
	; all year; 323	Carpenter & Chamberlain	1946
minnesotae Barr	;; 62, 323	Stone	1965

TABLE 1 - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
UULISETA morsitans (Theobald)	Pondlike bog inclusions, mostly in senescent togs of the Sphamur-Ledur-Pinea class, choked with Myrica gale or Carex;; 5	Frohne	1956
	Semi-permanent and permanent pools overgrown with Carex motrata;; 5	Gjullin et al.	1961
	; July-Sept. 5	Sommerman	1964
	Common in habitats containing sedged and in corshaded pools in a tamarack bog;; 62	Rempel	1953
	Common in heath and alder bogs where water is brown and acid;; 62; 323 (Marshes, bogs, cold pools, rarely bites man)	Steward & McWade	1961
	Spring-fed forest pools;; 62. In holes under old tree stumps, forest pools;; 323	Matheson	1944
	Unshaded pools with rank grass and fed by fresh water; rare; 323	Stage et al.	1952
	Tamarack bog, cool shaded pools around base of tamarack hummocks;; 323	Ross	1947
	; April-Oct.; 323	Fellton et al.	1950
parodites Dyar	<del>;</del> ; 323	Stone	1965
particeps (Adams)	Roadside ditches;; 5	Gjullin et al.	1961
	;; 323	Stone	1965
DEINOCERITES cancer Theobald	Crabholes in marl soil of coastal marshes or in fresh-water swampy places, mostly in brackish or salt water habitats, cypress and maple swamp; rest on sides of crabholes, bite at night, rare; 323°	King et al.	1960
	; FebDe; 323	Carpenter et a	1946
epitudeus Knab	;; 323	Rueger et al.	1950
mathesoni Belkin & Hogue	Crabholes; in light traps, all year; 323	Peyton et al.	1964

TABLE 1 - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
DEINOCERITES pseudes Dyar & Knab	In holes of land crabs, along banks of smail lake, brackish water, narrow heavily wooded strip along river bank, on beach; in light traps, on oil tankers, bites readily from dusk to midnight, all year; 323°	Peyton et al.	1964
spunius (Dyar & Knab)	Artificial containers; in light traps, enter houses by night; $323^{\circ}$	Fisk	1941
	Holes of the fiddler crab; nocturnal; 323	Matheson	1944
EUCOPETHRA underwoodi Underwood	Predaceous; common; 62, 323	Matheson	1944
HAEMAGOGUS equinus Theobald	;; 323 (Arboreal, experimental vector of yellow fever)	Foote & Cook	1959
JANTHINOSOMA rusica Say	; July, rare; 323°	Felt	1904
MANSONIA indubitans Dyar & Shannon	Pistia stratiotes, pickerelweed, arrowhead and water hyacinth; attracted to light traps, bite readily, all year, peaks Sept. and April, abundant; 323°	King et al.	1960
	Common amongst aquatic vegetation; active and roublesome in the evening, rare; 323	Seabrook	1951
perturbæns (Walker)	Attach to stems or roots of aquatic plants; rare; 62	Rempel	1953
	; persistent in entering houses, victious biter, July and Aug., fairty rare; 62	Hearle	1926
	; near swamps, crepuscular, June; 62°	Twina	1926
	; in woods; 62	Downe et al.	1963
	;; 62, 323 (On surface of ponds and waters with abundant emergent vegetation, spring and summer, attracted to light)	Steward & McWade	1961
	;; 62 (Bites at twilight, late at night and during dark days)	Katheson	1944

TABLE 1 - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
VANSONIA  perturbans  (Walker)  (cont.)	Marshes and lakes with much emergent vegetation, Typha, Carez, Pontederia, Sagitiaria, lake margins; in light traps, bite readily all day in shady moist places, more active in early part of night, probable vector of eastern equine encephalitis; 323°	King et al.	1960
	Marshes with cattails and aquatic sedges, pickerelweed and arrowhead; voracious biters, especially on cloudy afternoons and crepuscular periods; 323	koss	1947
	Permanent grassy swamps or margins of ponds; enter houses freely; 323	Lowry	1929
	Attached to sub-surface vegetation, associated with Limmobium;; 323	Quinby	1941
	Fresh water;; 323	Darsie et al.	1951
	Swamp pools;; 323	Knutson	1943
	; may transmit eastern equine encephalomyelitis in nature, vicious biter, rare in some areas; 323		1952
	; experimentally infected with Wuchereria bancrofti; 323	Eyles & Most	1947
	; naturally infected with eastern equine encephalitis; 323	Beadle	1952
	; very prevalent and annoying during early spring; 323	Beyer	1923
	; common, March-Dec., peak April, May and Aug.; 323	King et al.	1939
pseudotitillans Theobald	;; 323	Lane	1953
titillæns (Walker)	Sometimes pickerelweed, arrowhead and water- hyacinth, attached to floating grass, Paspalum repens; bites viciously, rare; 323°	King et al.	1960
	Only on leaves and roots of water lettuce; light traps; 323	King et al.	1939
	; June-Dec.; 323	Carpenter & Chamberlain	1946
	;; 323 (Bites after dark)	Dyar	1928
MEGARHINUS	Tree holes; rare; 323	King et al.	1939
rutilus (Coquillett)	Bromeliads, predaceous;; 323	Seabrook	1951

TABLE 1 - MOSQUITOES (continued)

			a
SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
MEGAPHINUS septentrionalis Dyar & Knab	Mud puddle; in buildings, rare; 323	Beyer	1923
	Tree holes, rock holes, wooden receptacles, predaceous;; 323	Dyer	1928
	Tree holes in oak-hickory woods;; 323	Ross	1947
	Tires, artificial container:; 323	Lake	1953
	; Jan., April-Oct.; 323	Carpenter & Chamberlain	1946
	; Feb., March; 323	kirth	1947
OPTHOPODOMYIA	Tree holes, overwinter frozen in ice; rare; 323	King et al.	1960
alta Baker	Artificial containers with organic matter; June-Sept.; 323	Breeland et al.	1961
	Soft maple tree hole;; 323	Ross	1947
	free holes;; 323	Matheson	1944
	: AugNov.; 323	Barnes et al.	1950
	, light traps; 323	Carpenter et al.	1945
califormica Bohart	Tree holes, usually cottonwood, water of high pH;; 323	Freeborn & Bohart	1951
Kurri Edwards	;; 323	Stone	1961
signifera	Water in decayed tree holes; rare; 323	King et al.	1960
(Coquillett)	Tree hole, ar: ficial container, highly polluted water;; 323°	Darsie et al.	1951
	Swampy area;; 323	Knutson	1943
	; all year; 323	Carpenter & Chambetlain	1946
	; coastland; 323	Beyer	1923
	; arboreal; 323	Matheson	1944
PSOROPHORA albipes (Theobald)	;; 323	Lane	1953
<i>champerico</i> Dyar & Knab	;; 323	Lane	1953

TABLE i - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
PSOROPHORA ciliata (Fabricius)	;; 62 (Small cracks in the soil, in rain pools, temporary waters, predaceous, May-Sept.)	Steward & McWade	1961
	Intermittently flooded grassy pools, ditches and depressions in open fields or marginal woodland area, willow swales; rest by day under vegetative cover, attracted to light, bite severe and persistent day and night, peak near dask, abundant; 323°	Breeland et al.	1961
	Readside ditches devoid of vegetation; rare; 323	Stearns et al.	1933
	Woods, open pools; grass, June, Sept.; 323	Horsfall	1936
	Rain pools; bite mostly on cloudy days and evenings; 323	Ross	1947
	Temporary rain pools, streambed pools, pasture potholes and flooded areas, margin or marshes and ponds;; 323	Rowe	1942
	Depressions and cracks in soil, natural pools, predaceous and cannibalistic;; 323	Schwardt	1939
	Grassy ditches, shallow grassy flats, rice-fields, everglades;; 323	King et al.	1960
	Roadside ditch adjoining salt marsh, normally in fresh water;; 323	Darsie et al.	1951
	Surface water, pothole, marsh;; 323	Bick	1946
	Permanent drainage canals;; 323	Beyer	1923
	; experimental transmission of eastern equine encephalitis; 323	Beadle	1952
	; bites at bright daylight; 323	Knutson	1943
	; March-Oct., Dec.; 323	Carpenter & Chamberlain	1946
	; in light traps; 323	Edman & Downe	1964
	; common; 323	King et al.	1939
columbiae (Dyar & Knab)	Ricefields, seepage puddles, natural depressions of soil, drainage and roadside ditches; rest in grass or low vegetation, in cars, most active at night; 323°	Schwardt	1939

rABLE 1 - MOSQUITOES (cortinued)

SPECIES	BREEDING HABITATS: ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
PSOROPHORA columbiae	Open pools, houses; woods, active June-Nov., peak June-Oct.; 323	Horsfall	1936
(Dyar & Knab) (cont.)	Grassy swales and depressions; common; 323	King et al.	1935
	Temporary rain pools, ruts or low places of a temporary nature;; 323	Shields	1938
	; by the sea and on the streets, abundant and annoying; 323	Aitken	1940
	; Jan.; 323	Beyer	1923
	; May; 323	Quinby	1941
confirmis (Lynch Arribálzaga)	Damp soil in depressions with vegetation; fierce biters, at night, abundant in the everglades and ricefields, all year, peak May-Oct.; 323°	Carpenter et :1.	1946
	Drained and flooded ricefields; serious pest ac night and bites all day, especially early morning and on dark days; 323	norsfall	1942
	Temporary pools, grassy ditches, open grassy swales, ricefields and their ditches; hite in grassy or shady places by day; 323	King et al.	1960
	Artificial containers; common; 323	Rozeboom	1942
	Temporary rain pools of pastures and farm yards and other more or less open situations;; 323	Ross	1947
	Shallow ponds, puddles, road ruts; 323	Good	1945
	Surface water, potholes, warsh;; 323	Bick	1946
	Irrigation overflow pools;; 323	Aitken	1940
	; experimental transmission of eastern equine encephalitis; 323	Beadle	1952
	; light traps; 323	Chamberlain et al.	19 <del>0</del> 4a
ctites Dyar	; August; 323	byar	1918

TABLE 1 - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVIT:; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
PSOROPHORA cyanescens (Coquillett)	Transient pools, pool with suspended clay nearly free of vegetaion; fields, thickets, about dwellings, bite in bright sunshine, rare; 323°	King et al.	1960
	Temporary pools in grassy fields and woodlands; bite day and night, vicious and persistent, also in full sunlight, April-Oct., abundant; 323	Breeland et al.	1961
	Shady flood and rain pools;; 323	Schwardt	1939
	Temporary rain puddles;; 323	Matheson	1944
	Pothole;; 323	Bick	1946
iscolor (Coquillett)	Temporary ground pools and grassy ditches; attracted to light, bite day and night, abundant; 323°	Breeland et al.	1961
	Temporary rain puddles, brackish water; fly in sunshine, vicious and persistent biters; 323	Beyer	1923
	Grassy pools, ricefields; rare: 323	King et al.	1960
	Rain pools, weed-choked roadside ditch;; 323	Ross	1947
	Grassy and polluted ponds;; 323	Shields	1938
	; April-Oct.; 323	Carpenter & Chamberlain	1946
discrucians (Walker)	; May; 323	Beyer	1923
ferox	Transient rain puddles;; 62°	Matheson	1944
(Humboldt)	;; 62, 323 (Temporary rain-filled pools in thickets and woodlands, occasionally in streambeds, potholes, common in and near thickets or forests, in the south, MarNov., in the north, May-Sept., persistent and painful biters)	Carpenter et al.	1946
	Temporary pools or depressions in woodlands, grassy pools or ditches on edge of tree growth, puddles from river overflows; bite day or night in or near woods, enter houses, abundant; 323°	King et al.	1960
	Flood pools, stream or river valleys; fierce biters, attack readily in shade during day; 323	Ross	1947
	Temporary rain pools; forests and shady spots, severe biter, common; 323	King et al.	1939

TABLE 1 - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUT.ON (GENERAL STATEMENTS)	AUTHOR	DATE
FSUFOPHORA ferox	Shaded rain pools; bive readily and attack in the open on cloudy days; 323	Steward & McWade	1961
(Humboldt) (cont.)	Swampy pords, woodland pools, small marshy creeks;; 323	Good	1945
	Shallow pool in area with dense undergrowth;; 323	Darsie et al.	1951
	Temporary rain pools in the open;; 323	Dickinson	1944
	; experimental transmission of eastern equine encepnalitis; 323	Beadle	1952
	; light traps; 323	Chamberlain et al.	1964a
	; March-Nov.; 323	Wirth	1947
horrida (Dyar & Knab)	Temporary rain pools in wooded areas; in or near woods, bite viciously; 323°	Rowe	1942
	Bottomland pools; bite readily in daytime; 323	Ross	1947
	Shaded temporary pools; rare; 323	King et al.	1960
	Temporary ground pools;; 323	Dyar	1922
	Heavily shaded pools;; 323	Matheson	1944
	; AprSept., attack during day in shade; 323	Carpenter et al.	1946
hovardii Coquillett	Shaded temporary pools; bite readily in wood, rare in most areas; 323°	King et al.	1950
	Temporary rainpools, cannibalistic and predaceous; rare; 323	King et al.	1939
	Permanent drainage canals; bite in daytime; 323	Beyer	1923
	Woodland pools, post oak flats of river valley, ruts in pasture;; 323	Coss	1947
	Surface water;; 323	Bick	1946
	; experimental transmission of eastern equine encephalitis; 323	Beadle	1952

TABLE 1 - MOSQUITOES (continued)

			~~~
SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
PSOROPHORA signipennis	Temporary rain pocls in arid country; bites by day and in the evening; 323	Dyar	1922
(Coquillett) (cont.)	Temporary ground pools, creek pools, in artificial containers; rarely bites man; 323	Rozeboom	1942
	Transient pools and irrigated fields; plains and valleys, in light traps, rare; 323	King et al.	1960
	Flooded areas, intermittent marsh; June-Aug., vicious biter; 323°	Rowe	1942
	River pools; common in summer and autumn; 323	Barber	1939
	Roadside pools, evanescent rain pools in arid plain sections;; 323	Mail	1934
	; May-Oct.; 323	Edman & Downe	1964
texcnur. Dyar & Knab	;; 323	Dohanian	1920
varipes (Coquillett)	Overflow pools of streams and rivers in dense swamps, in floatage; grasslands, bottomland areas, bite day to dusk, peak afternoon, May- Oct., abundant; 323°	Breeland et al.	1961
	Temporary woodland pools and floodwaters in mats of debris; along streams and rivers, wooded swamps; 323	King et al.	1960
	Temporary rainpools; exceedingly annoying in woods, severe biter, common; 323	King et al.	1939
	Overflow pools; dense woods, peak May, July; 323	Horsfall	1936
	Cypress bottoms; vicious biter. April; 323	Ross	1947
	Shaded temporary water; attack any time; 323	Matheson	1944
STEGOMYIA signifer Coquillett	Somewhat foul water;; 323	Felt	1904
TAENIORHYNCHUS perturbæns	Marshes and reedy edges of ponds; enters houses, persistent and vicious biter, June and July; 62°	Twinn	1926a
Walker	; woods; 62	McLintock	1944
	Permanent ponds, lake; enter houses; 323°	Owen	1937
	; April-Oct.; 323	Wirth	1947

TABLE 1 - MOSQUITOES (continued)

SPECILS	BREEDING HABITAT:; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
THEJBAIDIA alaskaensis	;; 5, 62 (Troublesome, bites above snow, in the tundras)	Martini	1930
Ludlow	Grassy marshes in river valleys;; 323	Mail	1934
dyari	; May and June; 62	Hearle	1927
Coquillett	; forests; 323	Séguy	1924
impatiens	<del></del> ; <del></del> ; 5	Freeborn	1926
Walker	Ponds;; 62	McLintock	1944
	; March-Aug.; 62	Hearle	1927
	Deep snow water pools and springs; in mountains in the timbered areas, feed only in the evening about dusk and at times are very vicious, May- Aug.: 323°	Rees	1943
	Deep woodland pools, shallow and well shaded pools, rarely in the open, in water of pH 6.8 to 7.0; numerous in April and May; 323	Mail	1934
	Large mat pool; rare; 323	Irwin	1943
	; in high mountain woodlands, bites very viciously just at dusk; 323	Rees	1934
incidens	;; 5, 323 (Mountains and coast)	Séguy	1924
Thomson	; Jan., March-Sept.; 62	Hearle	1927
	Deep spring pools, artificial containers in the vicinity of houses, roadside pools and around artesian wells; occasionally attacks man; 323°	Rees	1943
	Domestic, all types of permarent pools; all year; 323	Freeborn	1926
	Clear, cold spring pools;; 323	Rees	1934
	Permanent, foul pools;; 323	Mail	1934
inornata	Cool, shaded pools; woods, houses; 62	McLintock	1944
(Williston)	; March, April and July-Aug.; 62	Hearls	1927
	Snow pools; plains areas and in the mountains up to 9,000 feet, timber regions but also in the open, bite man occasionally especially in the evening or in the shade of the wooded areas; 323°	Rees	1943

TABLE 1 - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
THEOBALDIA inormata (Williston) (cont.)	Spring pools, ponds and streambed pools, permanent ponds and in evanescent rain pools often foul from stagnation or dumpage; April; 323	Rowe	1942
	Permanent pools, partly dried up streams where deeper pool remain; June-Sept., enters houses, occasionally bites man; 323	Mail	1934
	Clear, cool waters of stream pools, seepages and temporary rain pools, abundant in winter; 323	Rozeboom	1942
	Open grassy pools, artificial water containers; common; 323	King et al.	1939
	Swamps; common in summer and autumn; 323	Barber	1939
	Marshes, temporary rain pools, woodland pools, margin of ponds,; 323	Owen	1937
	Wet weather pond in an open cow pasture, ditches;; 323	Shields	1938
	Large mat pool;; 323	Irwin	1943
	; rare, cooler spring and fall months; 323	Quinby	1941
	; March-April, peak March; 323	Horsfall	1936
	; Oct.; 323	Christensen & Harmston	1944
raccrackenae Dyar & Knab	; wooded parts of valley and along coast; 323	Freeborn	1926
melænura (Coquillett)	Permanent leather leaf bigs and liver pools, in root holes; July-Nov., peak Oct.; 323	Knutson	1943
	Small permanent collections of water; sylvan, rare; 323	King et al.	1939
	Bases of trees and stumps;; 323	Shields	1938
	Pools in sphagnum swamps;; 323	Stearns et al.	1933
morsitums (Theobald)	; May; 62	Winn & Beaulier	1932
	Deeper pools of lake mat and swamp, shaded portion of beach pool; bases of trees and stumps near breeding pools, May and Aug., common; 323	Irwin	1943

TABLE 1 - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
THEOBALDIA morsitons (Theobald)	Seepage, spring-fed pools, root holes with constant level of water; April-July, peak May; 323	Knutson	1943
(cont.)	Permanent marshy border of lake, intermittent marsh near lake; —; 323	Rowe	1942
	Cold forest pools, marshes, temporary rain pools;; 323	0ven	1937
TOXORHYNCHITES rutilus (Coquillett)	;; 323	Stone et al.	1959
rutilus rutilus (Coquillett)	Tree holes, artificial containers, predaceous and cannibalistic; crepuscular, in woods, rare; 323	King et al.	1960
rutilus septentrionalis (Dyar & Knab)	Tree holes, artificial containers, predaceous and cannibalistic; forests, March, May and Sept., rare 323		1961
	; active by day and early evening; 323	King et al.	1960
septentrionalis (Dyar & Knab)	Tree holes; —-; 323	Darsie et al.	1951
URANOTAENIA	Permanent ponds in spring; rare; 323	Dyar	1922
<i>anhydor</i> Dyar	Pond filled with cattails;; 323	Matheson	1944
	Reedy swamp;; 323	Dyar	1907
ænhydor ænhydor Dyar	;; 323	Stone	1965
ænhydor syntheta Dyar & Shannon	;; 323	Stone	1965
coatzacoalcos Dyar & Knab	;; 323	Lane	1953
geometrica Lutz	;; 323	Lane	1953
lowii	Smali ground pools;; 5	Dyer	1922
Theobald	Ground pools, grassy pond and lake margins, pool with Myriophyllion verticulation; in light traps, rare; 323	King et al.	1960
	; in building; 323	Веует	1923
	; 211 year; 323	Carpenter & Chamberlain	1946

TABLE 1 - A05QUITOES (continued)

SPECIES	BREEDING HABITATS; /LJULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
URANOTIENIA capphorina (Osten-Sacken)	; at light; 62 (Permanent pools and ponds with emergent or floating vegetation, bite man)	Steward & McWade	1961
(creen-backen)	Permanent pools with water hyacinth, Piaropus crassipes; dark moist crevices in walls and between bricks, abundant; 323 (Semi-permanent ground pools, below leaves of Lemma warm stagnant pools with Spirogyra, bites man)	Hinman	1935
	Permanent pools, ponds and lakes containing emergent and floating vegetation; in damp situations in culverts, amongst vegetation, rarely bites man; 523°	Carpenter et al.	1946
	Permanent grassy pools, swamps and vegetation at lake margins, in Lerma; in caves and hollow trees, in light traps, common; 323	King et al.	1960
	Fermanent or semi-permanent ponds in weed-choked situations, cattail marshes, dense marginal growth of Jussiaea;; 323	Ross	1947
	Permanent collections of water, in wet hoof prints, depressions in creek beds, damp underbrush and logs in swamps;; 323	Rozeboom	1942
	Meagows, open swamp areas well overgrown with floating vegetation;; 323	Headlee	1945
	Marshes, temporary rain pools, bog in sphagnum mat;; 323	Owen	1937
	Generally associated with other fresh-water mosquitoes;; 323	Parsie et al.	1951
	Ornamental pools, among water chestnut;; 323	Good	1945
	Temporary rain pools in the open;; 323	Dickinson	1944
	; grasses at tree bases and stumps in swamps; 323	King et al.	1939
	; in building; 323	Beyer	1923
	; all year; 323	Carpenter & Chamberlain	1946
	; rare; 323	Stearns et al.	1933

APPLICATION OF THE PROPERTY OF THE PERSON OF			
SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
UPANOTAENIA socialis Theobald	Permanent pools;; 323	Dyar	1922
syntheta Dyar & Shannon	Swamps and riverbeds; common in summer and autumn; 323	Barber	1939
	Ground pools;; 323	Dyar	1928
WYFOMYI4 bahana Dyar & Knab	;; 323	Bonne & Bonne-Wepster	1925
hayret	Pitcher plant Sarracenia purpurea venosa; rare;	King et al.	1960
Dodge	; in sandy areas overgrown with scrub bak; 323	Dodge	1947
mischellii (Theobald)	Only at the base of epiphytic Bromeliaceae leaves; bite readily all day in shady humid woodlands, yards, greenhouses with bromeliads, all year, rare; 323°	King et al.	1960
	; occasionally bite man; 323	Carpenter et al.	1946
	; in light traps; 323	Chamberlain et al.	1964 a
smithii (Coquillett)	In leaves of pitcher plants, where they over- winter, growing in bogs and marshes; all year; 62	Steward & McWade	1961
	Ground pools still covered with .now and ice, taller, pitcher-shaped leaves exposed to the sun;; 62	Rempel	1953
	New leaves; all year, peak AugSept.; 323	Knutson	1943
	Only in Sarracenia purpurea; rare; 323	King et al.	1939
	Tamarack bogs, pitchers of Sarracenia purpurea, overwinter in pitcher plants;; 323	Ross	1947
	Leaves of plants, pitcher plants from a sphagnum bog;; 323	Dickinson	1944
	; common in bog area; 323	Irwin	1943
	; nocturnal 323	Dyar	1928
v <i>anduzeei</i> Dyar & Knab	Leaf bases of epiphytic Bromelfaceae; bite readily, rare, all year; 323°	King et al.	1939

TABLE 1 - MOSQUITOES (con.lusion)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
WYEOMYIA  i duzeei  Diar & Knab	; occasionally bite man; 323	Carpenrer et al.	1946
(cont.)	; light traps; 323	Dow et al.	1964
	; in woods; 323	King et al.	1960

TABLE 2 - SUMMARY OF DISEASES OR DISEASE ORGANISMS TRANSMITTED BY MOSQUITOES

		DISEASE ORGANISM	
SPECIES :	VIRUS & : RICKETTSIA :	:	: ITHER: DISTRIBUTION :
AEDES  aeg:	Dengue & Yellow fever		323
cantator (Coquillett)	Equine encephalomye- litis		323
ANOPHELES albimanus Wiedemann		Malaria	323
<i>harberi</i> Coquillett		Plasmodium vivax	323
erucians Wiedemann		Malaria	323

## B. BLACK FLIES

The black fly entries constitute a large number of species, with documentation of their biology. No disease transmission was recorded. In the table are listed 234 species or subspecies.

TABLE 1 - BLACK FLIES

# C. SAND FLIES

The sand fly entries include a few species of Psychodinae which do not bite but may be pests of man, often causing allergic reactions. Little is to be found in the literature on the biologies and disease transmissions of these species. Host of the data are distributional records.

The table includes 13 species or subspecies, most of which are in the large genus Phlabotomus.

## D. MIDGES

· さいなるからない かとか かいままれ かまい かんかい からない かんかい

The midges include representatives from the family Ceratopogonidae. In some areas the biting species, especially *Culicoides*, are called "sand flies". Little is known of the biology of individual species; however, the larvae are known to occur either in water or in moist terrestrial environments. Although quite important as pests, these biting midges are vectors for several disease organisms in other countries. No disease transmission is recorded for America North of Mexico.

The table includes 122 species or subspecies, most of which are in the large genus Culicoides.

# E. HORSE FLIES

The entries for horse flies (Tabanidae) include very little biology. Most of the literature on this large and important group is concerned with taxonomy, a lesser amount on distribution, and no disease transmission was recorded.

The synonymy, both at the genus and the species level, is very complex. Several specialists are currently striving to straighten out some of these problems.

In the table are listed 55% species or subspecies, but it is certain that many of these are not valid names.

## F. BUTING FLIES

Only 4 species of biting flies care recorded. A report of intestinal mylasis caused by Stomonys calcitrans is included.

TABLE 1 - BITIFG FLIES

SPECIES	BREEDIFG HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
STOWCKIS calcitrans (Linnseus)	;: 5, 62; ective June-Sept., beak Aug.; 325 (Pestiferous to man, vector of acute epidemic poliomyelisis)	Bruss	1913
	; abundant in Gulf beaches, active and persistent bitters in the evening, July; 62°	Brues	1947
	;; 323*	Canavan	1936
	;; 323°	Simmons & Dove	1942
SYMPHOROMYIA atripes	;; 5°	Frohne	1956
Bigot	; inflicts a most painful bite, drawing blood profusely and causing some swelling of the bitten spet, persistent, bites on sunny days and in the open; 62°, 323°	fuss	1940
hirta Bigot	; occasionally bits can savagely, bite cause irritation, swelling and itching, bites persistently; 323°	Mills	1943
pachyczras Williston	;; 62, 323 (Aggressive biter)	Knac	1915

## G. NON-BITING FLIES

The entries for non-biting flies include representatives of several groups. Of course, the most important species in this category are those that feed as larvae on the tissues of living animals.

The table includes 45 species or subspecies.

## TABLE 1 - NON-BITING PLIES

A STATE OF THE STA

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	ROPTUA	DATE
APHIOCHAETA fe:r::ginea Bruwetti	;; 323 (Causes intestinal myiasis)	Spooner	1920

## H. FLEAS

The entries for fleas include almost no biology. Very few authors deal with flea biology. A few comment on fleas as vectors, but most of the literature deals with taxonomy and hosts. Only when the flea species is said to bite man is a host recorded here. The tables include 543 species or subspecies.

## I. BUGS

The bugs or Pemiptera seem to be uncommon as pests of man in North America. The few entries comprise a variety of species, several of which are not obligated blood feeders.

Only 30 species or subspecies are listed in this group.

TABLE 1 - BUGS

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
CIMEX	; in houses, July; 62	Ross	1916
lectularius Linnaeus	;; 62°	Spencer	1935
	; nocturnal, hiding during day in cracks of beds, behind wallpaper, objects hanging on walls; 323	Flint	1922
	; in houses, summer; 323	Harned & Allen	1925
	;; 323°	Cooley	1915
pilosellus Horvath	; occasionally in houses; 323°	Stearns	1937

# J. URTICATING AND VESICATING ARTHROPODS

The entries for urticating and vasicating arthropods are surprisingly few. Only 9 species are listed.

TABLE 1 - URTICATING AND "LUICATING ARTHROPODS

## K. TICKS

The tick entries seldom include information on the immature forms separately from the adults. In fact, most of the entries contain only distributional data.

Ticks are important livestock pests in America; also, some serious disease organisms are transmitted by ticks. In the table are listed 110 species or subspecies.

TABLE 1 - TICKS

SPECIES	SPECIFIC NOTES; DISTRIBUTION (GENERAL STATEMENTS;	AUTHOR	DATE
AMBLYOMMA  americanum  (Linné)	Among grasses; 62; 323*	Gregson	1956
	Suspected vector of Rocky Mountain spotted fever, tularemia and Bullis Tever, naturally injected with causative organism of Rocky Mountain spotted fever, American Q fever; 323°	Cooley & Kohls	1944 a
	Vector of spotted fever, potential vector of tularemia, abundant in woodlands, active February-Sept., peak late May or early July; 323	Brennan	1945
	Attached to man in all its active stages, naturally infected with Rickettsia diaphorica; 323*°	Bishopp & Trembley	1945
	Experimental transmission of Bacterium tularense, possible vector of spotted fever; 323	Parker	1934

# L. MITES

The entries for mites include a wide variety of species, most of which seldom bite man. For the most part, there are no biological entries. The Trombiculid entries are, of course, for larval stages. Most of the others will be for various stages, but mostly for adults.

There are 78 species or subspecies recorded in the tables.

TABLE 1 - MILES

SPECIES	SPECIFIC NOTES; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
ACARTSOUS braciliensis (Ewing)	; 323°	Ewing	1943
bustantanensis (Da fonseca)	; 323°	Ewing	1943
flui (Van Thiel)	; 323°	Ewing	1943

# M. MISCELLANEOUS ARTHROPODS

The entries listed as Miscellaneous Arthropods are lice, beetles, scorpions and spiders. There are only 17 species or subspecies listed.

TABLE 1 - MISCELLANEOUS ART POSPODS

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
ATTAGENUS piceus (Olivier)	;     ;     323*	Scott	1962
AUTOSERICA castanca Arrow	; invasion of human ear; 323°	Maddock & Fehn	1958
CENTRUROIDES suffusus Peacock	;; 323 (Stings man, poison may cause death)	Baerg	1929
vittatus Say	; sting causes severe pain; 323°	Baerg	1929
CYCLOCEPHALA borealis Arrow	; invasion of human ear; 323°	Maddock & Fehn	1958
EURYPEIMA : alifornica Ausserer	;; 323°	Baerg	1929
LATRODECIUS mactans	;; 62°	Strickland	1936
Fabricius	; sting may cause death; 323°;; 323 (Bites ran, producing muscular pain and mild paralysis)	Herms Baerg	1926 1929
NEOHAEMATOPINUS citellinus Ferris	; naturally infected with Coxiella burnetii; 323	Sidwell et al.	1964
laeviusculus 😞 Grube	; experimental transmission of Pasteurella tularense; 323	Parker	1934
OCHROSIDIA villosa Burmeister	; invasion of human ear; 323°	Maddock & Fehn	1958
PEDICULUS humanus De Geer	;; 323°	Hatch	1938
nurarus corporis De Geer	;; 323°	Hatch	1938
PHTHIRUS tubis Linnaeus	,; 323°	Hatch	1938
POLYPLAX spinklosa Burmeister	; experimental typhus vector; 323	Cole & Koepke	1946
